

# THE CENTURY DICTIONARY

PREPARED UNDER THE SUPERINTENDENCE OF

# WILLIAM DWIGHT WHITNEY, PH. D., LL. D.

PROFESSOR OF COMPARATIVE PHILOLOGY AND SANSKRIT IN YALE UNIVERSITY

cludes three things: the construction of a general dictionary of the English language which shall be serviceable for every literary and practical use; a more complete collection of the technical terms of the various sciences, arts, trades, and professions than has yet been attempted; and the addition to the definitions proper of such related encyclopedic matter,

proper of such related encyclopedic matter, with pictorial illustrations, as shall constitute a convenient book of general reference.

About 200,000 words will be defined. The Dictionary will be a practically complete record of all the noteworthy words which have been in use since English literature has existed, especially of all that wealth of new words and of applications of old words which has sprung from the development of the thought and life of the nineteenth century. It will record not of the nineteenth century. It will record not merely the written language, but the spoken language as well (that is, all important provincial and colloquial words), and it will include (in the one alphabetical order of the Dictionary) abbreviations and such foreign words and phrases as have become a familiar part of English speech.

#### THE ETYMOLOGIES.

The etymologies have been written anew on a uniform plan, and in accordance with the esa uniform plan, and in accordance with the es-tablished principles of comparative philology. It has been possible in many cases, by means of the fresh material at the disposal of the etymologists, to clear up doubts or difficulties hitherto resting upon the history of particular words, to decide definitely in favor of one of several suggested etymologies, to discard nu-merous current errors, and to give for the first time the history of many words of which the merous current errors, and to give for the first time the history of many words of which the etymologies were previously unknown or erro-neously stated. Beginning with the current accepted form of spelling, each important word has been traced back through earlier forms to its remotest known origin. The various prefixes and suffixes useful in the formation of English words are treated very fully in separate articles.

#### HOMONYMS.

Words of various origin and meaning but Words of various origin and meaning but of the same spelling, have been distinguished by small superior figures (1, 2, 3, etc.). In numbering these homonyms the rule has been to give precedence to the oldest or the most familiar, or to that one which is most nearly English in origin. The superior numbers apply not so much to the individual word as to the group or root to which it belongs, hence the different grammatical uses of the same homonym are numbered alike when they are separately entered in the Dictionary. Thus a separately entered in the Dictionary. Thus a verb and a noun of the same origin and the same present spelling receive the same superior number. But when two words of the same form and of the same radical origin now differ considerably in meaning, so as to be used as dif-ferent words, they are separately numbered.

#### THE ORTHOGRAPHY.

Of the great body of words constituting the familiar language the spelling is determined by well-established usage, and, however accidental and unacceptable, in many cases, it may be, it is not the office of a dictionary like

(as labor, labour), in er or re (as center, centre), in ize or ise (as civilize, civilise); those having a single or double consonant after an unaccented vowel (as traveler, traveller), or spelled with c or with w or w (as hemorrhage, hemorrhage); and so on. In such cases both forms are given, with an expressed preference for the briefer one or the one more accordant with native analogies.

#### THE PRONUNCIATION.

No attempt has been made to record all the varieties of popular or even educated utterance, or to report the determinations made by different recognized authorities. It has been necessary rather to make a solection of words to which alternative pronunciations should be accorded, and to give preference among these according to the circumstances of each particular case, in view of the general analogies and tendencies of English utterance. The scheme by which the pronunciation is indicated is quite simple, avoiding over-refinement in the discrimination of sounds, and being designed to be readily understood and used. (See Key to Pronunciation on back cover.) different recognized authorities. It has been

#### DEFINITIONS OF COMMON WORDS.

In the preparation of the definitions of common words, there has been at hand, besides the material generally accessible to students the material generally accessible to students of the language, a special collection of quotations selected for this work from English books of all kinds and of all periods of the language, which is probably much larger than any which has hitherto been made for the use of an English dictionary, except that accumulated for the Philological Society of London. Thousands of non-technical words, many of them occurring in the classics of the language, and thousands of meanings, many of them familiar, which have not hitherto been noticed by the dictionaries, have in this way been obtained. The aries, have in this way been obtained. The arrangement of the definitions historically, in the order in which the senses defined have en-tered the language, has been adopted wherever possible.

# THE QUOTATIONS.

THE QUOTATIONS.

These form a very large collection (about 200,000), representing all periods and branches of English literature. The classics of the language have been drawn upon, and valuable citations have been made from less famous authors in all departments of literature. American writers especially are represented in greater fullness than in any similar work. A list of anthors and works (and editions) cited will be published with the concluding part of the Dictionary.

#### DEFINITIONS OF TECHNICAL TERMS.

Much space has been devoted to the special terms of the various sciences, fine arts, mechanical arts, professions, and trades, and much care has been bestowed upon their treatment. They have been collected by an extended ment. They have been collected by an extended search through all branches of literature, with the design of providing a very complete and many-sided technical dictionary. Many thousands of words have thus been gathered which have never before been recorded in a general dictionary, or even in special glossaries. To the biological sciences a degree of prominence has been given corresponding to the remarkable recent increase in their vocabulary. The new material in the departments of biology may be, it is not the office of a dictionary like the biological sciences a degree of profile this to propose improvements, or to adopt those nence has been given corresponding to the rewhich have been proposed and have not yet markable recent increase in their vocabulary. Which accompanies the markable recent increase in their vocabulary. The plan of the preface (of which the above is in part a condensation), which accompanies the first section, and to which reference is made. A list of the abbreviations used in the etymologies and definitions, and keys to pronunsanctioned by excellent authorities, either in special dictionaries. In the treatment of phythis country or Great Britain, or in both. Fa-

THE plan of "The Century Dictionary" inmiliar examples are words ending in or or our ical arts and trades, and of the philological cludes three things: the construction of a (as labor, labour), in er or re (as center, centre), sciences, an equally broad method has been general dictionary of the English language in ize or ise (as civilize, civilize); those having a adopted. In the definition of theological and ecclesiastical terms, the aim of the Dictionary has been to present all the special doctrines of the different divisions of the Church in such a manner as to convey to the reader the actual intent of those who accept them. In defining legal terms the design has been to offer all the legal terms the design has been to offer all the information that is needed by the general reader, and also to aid the professional reader by giving in a concise form all the important technical words and meanings. Special attention has also been paid to the definitions of the principal terms of painting, etching, engraving, and various other art-processes; of architecture, sculpture, archæology, decorative art, ceramics, etc.; of mnsical terms, nautical and military terms, etc.

### ENCYCLOPEDIC FEATURES.

The inclusion of so extensive and varied a vocabulary, the introduction of special phrases, and the full description of things often found essential to an intelligible definition of their names, would alone have given to this Diction-ary a distinctly encyclopedic character. It has, however, been deemed desirable to go some-what further in this direction than these conditions render strictly necessary.

ditions render strictly necessary.

Accordingly, not only have many technical matters been treated with unusual fullness, but much practical information of a kind which dictionaries have hitherto excluded has been added. The result is that "The Century Dictionary" covers to a great extent the field of the ordinary encyclopedia, with this principal difference—that the information given is for the most part distributed under the individual words and phrases with which it is connected, instead of being collected under a few general topics. Proper names, both biographical and geographical, are of course omitted, exgeneral topics. Proper names, both mographical and geographical, are of course omitted, except as they appear in derivative adjectives, as Darwinian from Darwin, or Indian from India. The alphabetical distribution of the encyclopedic matter under a large number of words will, it is believed, be found to be particularly helpful in the search for those details which are generally looked for in works of reference.

## ILLUSTRATIONS.

The pictorial illustrations have been so selected and executed as to be subordinate to the text, while possessing a considerable degree of independent suggestiveness and artistic value. To secure technical accuracy, the illustrations have, as a rule, been selected by the specialists in charge of the various departments, and have in all cases been examined by them in proofs. The cuts number about six thousand.

#### MODE OF ISSUE, PRICE, ETC.

"The Century Dictionary" will be comprised in about 6,500 quarto pages. It is published by subscription and in twenty-four parts or sections, to be finally bound into six quarto vol-nmes, if desired by the subscriber. These sec-tions will be issued about once a month. The price of the sections is \$2.50 each, and no subscriptions are taken except for the entire

A brake used to arrest the motion of a railroad-car. When operated by hand, it comprises a brake-wheel, brake-shaft, brake-chain, brake-lever, and brake-shee, with their various parts. (See brake-shaft, brake-shoe, and brake-wheel.) Where other than hand-power is used, the brake consists essentially of the shoe and lever and some means (as a ceiled spring, steam, compressed air, or the pressure of the air acting in a vacuum) for developing power and applying it to operate the brake-lever. When all the brakes of a train are operated together by a single application of power, the apparatus is called a continuous brake. The most important forms of such brakes are the Westinghouse brake and the vacuum-brake. (See air-brake.) Some continuous brakes, as the improved Westinghouse, are operated by the breaking apart of the cars in the train, and are called automatic or self-setting brakes. See cut under brake3.

It. carcinoma), < Gr. καρκίνωμα, a cancer, < καρκίνοῦν, affect with cancer, < καρκίνος, a crab, cancer: see carcinus and cancer.] A tumor which grows more or less rapidly, tends to break down and ulcerate in its later stages, propagates itself in neighboring or more distant parts, and after excision very frequently recurs; a cancer, ulcerate in its later stages, propagates itself in neighboring or more distant parts, and after excision very frequently recurs; a cancer, in the stricter sense of that word. A carcinoma is characterized microscopically by trabeculæ and nodular masses of cells of epithelial form and origin, running in a stroma of tissue of mesoblastic origin. Several types are distinguished: (1) flat-celled epithelioma; (2) cylinder-celled epithelioma; (3) simple carcinoma (carcinoma simplex), a variety of glandular carcinoma forming nodular tumors of considerable consistency; (4) carcinoma scirrhosum, or scirrhous cancer, a variety forming very hard nodules of almost the consistency of cartilage; (5) carcinoma gelatinosum, or cancer with the stroma consisting of mucous tissue; (7) cylindroma carcinomatodes; (8) carcinoma gigantocellulare; (9) melanocarcinoma. Certsin pathologists exclude the epitheliomata from the carcinomata, and hold that the latter are not of epithelial origin, but are purely a mesoblastic formation. Some, again, founding the definition of carcinomata entirely on anatomical features, independently of histogenetic considerations, include in them the sarcomata alveolaria. The softer carcinomata are as a rule the more rapidly fatal. The earlier a cancer is removed, the greater is the prolongation of life and the chance of escaping a return. See cylindroma, epithelioma, sarcoma.—Alveolar carcinoma. See alveder.

strips by hand as they became full. In modern cotton-carding machines a loose roll of fibers, called a lap, is placed in guides and rests upon a roller, which as it revolves unwinds the lap and delivers it to the feed-roll, on passing through which it is seized by the eard-teeth upon a small cylinder, called the licker-in, from which it is drawn by the teeth of the clothing of the main cylinder. Other small cylinders successively remove the fibers from and deliver them to the main cylinder. The tufts, tangles, or knots which are not loosened by the action of these cylinders project beyond the teeth of the main cylinder, and are caught by the teeth of a succession of wooden slats called card-tops, top-cards, or top-flats, from which they are cleared or stripped by hand or by mechanical devices. The fibers upon the main cylinder are laid parallel upon it, and are removed by means of the doffer, a cylinder noving in an opposite direction from the main cylinder and at a very much slower rate, and whose whole surface is covered by card-clothing. The cotton is stripped from the doffer in a thin continuous sheet of its full width, by means of a comb vibrating vertically in contact with the teeth of the doffer. This sheet of fibers is drawn together into a ribbon, traverses a funnel or trumpet, and is passed between successive pairs of rolls, which draw out and condense the sliver, and finally deliver it into the can ready for the drawing-frame, where it is doubled and drawn preparatory to twisting or spinning. For fine work, the operation of carding is repeated. The preparatory card or cards are called breakers, and those machines on which the carding is completed are called finishers. Extraordinary care, ordinary care. See the adjectives.—Take care, be careful; beware.—To have a care. See have.—To have the care of, to have a care. See have.—To have the care of, to have charge of.=Syn. Care, Concern, Solicitude, Anxiety. Care is the widest in its range of meaning; it may be with or without feeling, with or without action: as, the care of a garden. In its strongest sense, care is a painful burden of thought, perhaps from a multiplicity and constant pressure of things to be attended to: as, the child was a great care to her. Concern and solicitude are a step higher in intensity. Concern is often a regret for painful facts. Care and concern, may represent the object of the thought and feeling; the others represent only the mental state: as, it shall be my chief concern. Solicitude is sometimes tenderer than concern, or is attended with more manifestation of feeling. Anxiety is the strongest of the four words; it is a restless dread of some evil. As compared with solicitude, it is more negative: as, solicitude to obtain preferment, to help a friend; anxiety to avoid an evil. We speak of care for an aged parent, concern for her comfort, solicitude to leave nothing undone for her welfare, anxiety as to the effect of an exposure to cold. (For apprehension and higher degrees of fear, see alarm.)

Perhaps a sketch drawn by an alien hand, in the beat faith, might have an air of caricature.

Howells, Venetiau Life, xx.

Syn. Caricature, Burlesque, Parody, Travesty. The distinguishing mark of a caricature is that it absurdly exaggerates that which is characteristic, it may be by picture or by language. A burlesque renders its subject ludicrons by an incongruous manner of treating it, as by treating a grave subject lightly, or a light subject gravely. Burlesque may be intentional or not. A parody intentionally burlesques a literary composition, generally a poem, by imitating its form, style, or language. In a parody the characters are changed, while in a travesty they are retained, only the language being made absurd. (See travesty.) In a burlesque of a literary work the characters are generally changed into others which ludicrously suggest their originals.

carman¹ (kar'man), n.; pl. carmen (-men). A
man who drives a car or cart.

This mountain, overlooking the bay of Acre in northwestern Palestine, has been from early times a resort for hermits, and in 1156 Berthold, a Calabrian monk, in obedience to a professed revelation from the prophet Elijah, built there a tower and a church and gathered around him about ten companions. From this small beginning arose the Carmelite order. According to an early rule, the monks were to live in separate cells, to abstain from meat, and to observe a strict fast from the Exaltation of the Cross (September 14th) to Easter, Sundays being excepted. Owing to Mohammedan persecutions, the Carmelites abandoned Monnt Carmel and established themselves in 1238 in Cyprus and elsewhere. In the sixteenth century St. Theresa, a Spanish lady of noble family, built a convent at Avila and established a discalced or reformed branch of the order, consisting of both monks and nuns, sometimes called barefooted Carmelites. The habit of the order is a cassock, scapular, and hood of brown color, and a white cloak, the hood covering the head and face and having holes for the eyes. In the United States there are convents last named follow the rule of St. Theresa, 2. [l. c.] A variety of pear.—3. [l. c.] A woolen material similar to beige cloth.

The principal artery of the nock of the into sleep, stupefy, ⟨κάρος, stupor: see curotic.]

I. n. The principal artery of the nock of the higher vertebrates. There are usually two carotids, right and left, giving off few if any branches in the neck itself, but supplying the head. In man, the right carotid arises in common with the right subelavian from the innominate artery; the left arises directly from the arch of the aorta; both ascend the neck nearly vertically, but somewhat divaricating from each other, in front of the spinal column and on each side of the trachea, inclosed with the pneumogastric nerve and internal jugniar vein in the earotid sheath, and divide opposite the upper border of the thyroid cartilage into the internal and external carotids; up to this division the right and left earotids are termed the common carotids. The external carotids are termed the common carotids. Supplying mainly parts of the head outside the brain-eavity; their branches are the superior thyroid, lingual, facial, occipital, posterior anrientar, ascending pharyngeal, internal maxillary, and temporal arteries. The internal carotids are the inner of the terminal branches of the common carotids, ascending deeply along the side of the neck and entering the eavity of the erantiun through the earotid canal in the temporal bone, supplying the brain and associate structures. (See cuts under embryo and lung.) A similar arrangement of the carotids is substantially repeated in mammals. In birds the disposition of these arteries varies much, but in most cases there is but one carotid, the left, or sinistrocarotid. Also carotis.

II, a. Of or portaining to the two great arteries of the neck: as, the curotid canal, the pas-

the left, or sinistroearotid. Also carotis.

carousal¹ (ka-rou'zal), n. [\(\carousc + -al;\)
the form being suggested perhaps by the older word carousal², carousel.] A feast or festival; a noisy drinking-bout or revel.

The swains were preparing for a carousal.

Sterne, Tristram Shandy, vil. 43. =Syn. Revel, Carousal, Nassail, Spree, Debauch, Saturnalia, Orgy agree in expressing times of excess in drinking; some of them include other sensual pleasures. They are in the order of strength and consequent reproduction implied. A revel is accompanied with some drunkenness,

disorder, and noise. A carousal is by derivation a time of drinking deeply; it may be a bacchanalian feast, a noisy, unrestrained drinking-bout. Wassail is limited by its associations with the past so as to be chiefly poetic or to express deep drinking. Spree is considered a colloquial word, but seems likely to win recognition as a convenient word for a period of drunkenness which incites to wild and reckless action. Debauch is distinctively excess, having less reference now than formerly to eating, applying chiefly to gross lewdness or drunkenness, which is often prolonged. Saturnalia, like wassail, hus historical associations; it is a strong word for license, noisy revelry, gross and continued debauchery. Orga is by derivation a secret nocturnal debauch, and by usage a time of joining in a wild or frantic abandonment to drunkenness or lust, or both—the extreme in that kind of misconduct. See feast.

Specifically-2. One who for hire undertakes Specifically—2. One who for hire undertakes the conveyance of goods or persons. The law distinguishes between common carriers and private or special carriers. One who carries not as a business, but only on occasion by special agreement, is termed a private or special carrier. One who holds himself out as a carrier, inviting the employment of the public generally, is a common carrier. He is bound to serve without favorltism all who desire to employ him, and is liable for the safety of goods intrusted to him, except by losses from the act of God or from public enemies, or unless special exemption has been agreed upon; and in respect to the safety of passengers carried he is liable for injuries which he

might have prevented by special care. The most familiar classes of common carriers are railroad companies, stagecoach proprietors, expressmen, truckmen, ship-owners, steamboat-lines, lightermen, and ferrymen. The special rules of liability which the law, for reasons of public policy, imposes on common carriers have not been applied in their full extent to the business of drovers, owners of tow-boats, log-drivers, and others who do not literally carry the property intrusted to them; nor are telegraph companies deemed common earriers in respect to the messages they transmit.

Cartesian (kär-tē'zian), a. and n. [\lambda F. Cartesian]

Latinized form of Curtes in the name Descartes (Des Cartes), of which the first element is a removable prefix.] I. a. Pertaining to the French philosopher René Descartes (1596–1650), to his philosophy, or to his geometrical method. In order to put philosophy on a sound basis, Descartes professed to begin by doubting all things. But the doubt, the thought, could not be doubted; hence the fundamental proposition of his philosophy, Copito, ergo sum (I think, therefore I am). This proposition (which is not a syllogism nor any formal mode of inference) means that, recognizing the fact that I think, I am irresistibly led to believe and clearly to discern that I exist, without being able to account for the inference. According to Descartes, the consideration that the conception of a deity involves the conception of a reality surpassing my own leads to the irresistible belief and clear perception of the existence of a God. Also, since veracity is an attribute of God, all that is clearly and distinctly apprehended must be true. This is the so-called Cartesian criterion of truth. Substances, he taught, are of two radically different kinds: the material, which are extended and not conscious, and the spiritual, which are extended and not extended—a doctrine which is called Cartesian dualism. The Cartesian doctrine of divine assistance, or occasionalism, which was not fully developed by Descartes himself, is that whenever the soul makes a voli-

tion God intervenes to cause the corresponding motion of the body. He also taught that brutes are mere machines without consciousness (the Cartesian automatism), and that all space is filled with matter, which turns about in vortices, and so produces the motions of the heavenly bodies.—Cartesian coördinates, in geom., the lines introduced (1637) by René Descartes for defining the positions of points in a plane. Two straight lines, OX and OY, are adopted arbitrarily as axes of coördinates, to which all positions are referred. Their point of intersection, O, is called the origin of coordinates. From any point, P, whose position is to be defined, a line, Mf., is drawn parallel to OY, and meeting the axis OX in M. The length OM, or the abscissa, being given, the position of P is determined; those in lines are called the Cartesian coördinates of the point P. The term is sometimes extended to a similar system for three dimensions.—Cartesian curve, See 11., 2.—Cartesian devil, Cartesian diver, or bottle-timp, a philosophical toy used to illustrate the principle of specific gravity. It consists of a hollow figure, usually in the fancied form of a demon, with a hole at some distance from the top. The figure is filled with air in the upper part and with water in the lower, and floats in a tall glass vessel nearly full of water and covered air-tight with india-rubber or a piece of bladder. When this cover is pressed down, the air mulermenth is compressed, and water enters the figure by the hole so as to bring the air within the figure to an equal degree of compression. The figure consequently sinks, and does not rise again until the pressure is removed.—Cartesian geometry, geometry treated by means of coördinates; analytical geometry. See Cartesian coördinates, above.—Cartesian lens, a lens so shaped that there is no spherical aberration; especially, a concavoronvex lens having one surface spherical and the other colours, it is impossible to say whether the principle as curue, the boust of a point whose distances from two

linear equation. A Cartesian oval is a real branch of a Cartesian curve. These ovals were first imagined by Descartes in connection with the theory of optics. The evolute of a Cartesian oval is the diacaustic of a circle.

II. n. 1. One who adopts the philosophy of

Descartes; a follower of Descartes.—2. Any curve of the

cusps on the absolute. There are three genera of Cartesians. The first consists of curves of the sixth class, composed of a pair of Cartesian ovels one inside

Cartesians.

The full-line curve is a limaçon: without it and within the loop is a Cartesian of two vals. On the other is a Cartesian having only one real oval. Which is a curve of the third class with a real cusp. Every Cartesian has a single bitangent.— Twisted Cartesian, a curve in space, the locus of a point whose distances from three fixed points are connected by two linear equations.

cartilage (kär'ti-lāj), n. [ \langle F. cartilage = Pr.

cartilage = Sp. cartilago = Pg. cartilagem = It.

cartilagine, \langle L. cartilago (cartilagin-), gristle;

origin unknown.] A non-vascular animal tisorigin unknown.] A non-vascular animal tissue blonging to the connective-tissue group; gristle. Typical hyaline cartilage is a translucent substance, of firm elastic consistence, constructed of roundish cells embedded in a nearly homogeneous intercellular substance. Fibrocartilage differs in that the intercellular substance becomes fibrillated; it thus approaches ordinary connective tissue. Reticular, yellow, or elastic cartilage, as that constituting in man the epiglottis, the cornicula laryngis, the Eustachian tube, and gristly parts of the outer ear, contains interlacing elastic fibers in considerable quantity. In the two latter forms the homogeneous substance remains unchanged in the immediate vicinity of the cells, forming their hyaline capsules. Chondrin, a substance resembling gelatin, may be extracted from cartilage by boiling. Cartilage usually persists in parts of the skeleton of adult vertebrates, as on the articular ends of bones, in the thorax, and in various passages which require to be kept open, as the windpipe, nostrils, and ears.—Alar cartilage. See alar.—Articular cartilage, an incrustation of hyaline cartilage on the articular ends or surfaces of bones, not covered by perichondrium on its free surface, with a finely granular matrix and small cells, showing no tendency to ossify, its density, smoothness, and elasticity contributing to the free movement of the parts.—Arytenoid cartilages, two triangular pyramidal cartilages, seated, one on each side, on the summit of the posterior portian of the cricoid cartilage. To them are attached the posterior ends of the vocal cords.—Cartilage of Wrisberg, a small cartilage on either side in the arytenoepiglottic fold. Also called cuneiform cartilage.—Cartisue belonging to the connective-tissue group;

lagos of Santorini, the horns of the larynx, or cornicula laryngis, borne upon the articlage, a variety of cartilage of which the notochord chiefly consists, composed almost entirely of large cells with the intervellular matrix at a minimum.—Circumrenterential cartilage, an annular piece of librocartilage couring in joint of slight mobility or none, as the public symphysis, the sacrolidacy produced in the interverterel articulations.—Connecting cartilage, a kind of fibrocartilage occurring in joint of slight mobility or none, as the public symphysis, the sacrolidacy control of the connection of the stemum, a produced of the stemum, and the connection of the stemum, or the kindle of pearly-bluish color, and consists of roundsheed in a nearly homogeneous intercellular substance, that is, numixed with fibrous tissue. The articular and costal cartilage, and the temporary cartilages of the fetal skeleton, are of this kind.—Interactilated and costal cartilage, and the temporary cartilages of the connected of the stemum, and the conn which iteshy knobs of the mantle-skirt are fitted.—Stratiform cartilage, a layer of fibrocartilage in an osseous groove along which a tendon glides.—Tarsal cartilage, a piece of fibrocartilage embedded in the eyelid, contributing to preserve its shape. Also called pathebrat cartilage.—Temporary cartilage, that cartilage which is replaced by bone in the process of ossification.

car-truck (kär'truk), n. The wheeled carriage which supports a railroad-ear. In Europe the pedestals for the axle-boxes are commonly attached to the body of the car. In the United States the car-body is supported upon two independent trucks placed beneath it. Each of these may have two, but usually four, and occasionally six wheels fixed upon revolving axles, whose journal-boxes vibrate vertically in pedestals secured to the framework of the truck. The bolster or cross-beam which directly supports the carbody is in the middle of the framework, and is suspended from it by equalizing bars and suspension-straps, in such a way as to distribute the weight upon alt the wheels and allow for the sway, or freedom of motion, essential to easy riding. Springs and brake mechanism are attached to the truck. See bearing.

plow-team of oxen, yoked four abreast.

Information from the same sonree [Statistical Account of Scotland] also explains the use of the word carnea for plough. For the construction of the word involves not 4 yoke of oxen, but 4 oxen yoked abreast, as are the horses in the carnea so often seen upon Roman coins. And the "statistical account" informs in that in some districts of Scotland in former times "the ploughs were drawn by 4 oxen or horses yoked abreast; one trod constantly upon the tilled surface, another went in the furrow, and two upon the stubble, or white land. The driver walked backwards, holding his cattle by halters, and taking care that each beast had its equal share in the draught."

of Man. Also carrel.

The Manx have a literature—a native vernacular Gaelic literature... This literature consists of ballads on sacred subjects, which are called carvals... It was formerly the custom in the Isle of Man for the young people who thought themselves endowed with the poetic gift to compose carols some time before Christmas, and to recite them in the parish churches. Those pieces which were approved of by the clergy were subsequently chanted by their authors through their immediate neighbourhoods, both before and after the holy festival. Many of these songs have been handed down by writing to the present time... The carvals are preserved in uncont-looking, smoke-stained volumes, in tow farm-houses and cottages situated in mountain gills and glens.

Specifically—5. In law: (a) A cause or suit in court; any instance of litigation: as, the case was tried at the last term. In this sense case is nearly synonymous with cause, which is the more technical term. Case includes special proceedings, as well as actions at law, suits in equity, and criminal prosecutions; and it implies not only a controversy, but also legal proceedings. More loosely, however, it is used for cause of action: as, he has a good case.

This false juge . . . sat in his consum.

And gaf his doomes upon sondry eas.

Called specifically case on appeal.

6. In gram., in many languages, one of the forms having different offices in the sentence which together make up the inflection of a noun: as, the nominative case, that of the subject of the verh, as he, dominus (Latin); the accusative or objective case, as him, dominum; the genitive or possessive case, as his (John's), the genitive or possessive case, as his (John's), domini. These are the only eases in modern English, and the objective is not distinguished in form from the nominative except in a few pronouns. In addition to the three cases found in English, Greek and German have a dative, Latin has a dative, an ablative, and a vocative, and Sanskrit further an instrumental and a locative. The French has lost all ease-distinction in nonus. Some languages, as the Finnish and Hungarian, have many more cases, even fifteen or twenty. All the cases but the nominative are called oblique cases.

cassava-plant. The roots, which are sometimes a yard in length, are grated, and the pulp is freed from its milky juice. This is done by means of sacks made of matting, which are filled and suspended from a beam, weights being attached to the lower end. The meal thus dried is often made immediately into bread by baking it in broad thin cakes. Starch is obtained by washing the meal in water and allowing the farinaceous portion to settle. This starch, when dried upon heated plates, is converted into taploca. The juice itself, especially that from the bitter cassava, contains a considerable amount of hydrocyanic acid, and is very poisonous.

caste<sup>1</sup>†, a. A Middle English variant of chaste. caste<sup>2</sup> (kast), n. [Formerly cast, only recently as F. caste, \ Pg. casta (\> Sp. casta), breed, race, caste; first applied to the classes of the Hindus by the Portuguese, who were the earliest colory of the caste nists in India; prop. fem. of casto, \( \) L. castas, pure, \( \) OF. chaste, E. chaste, q. v. \( \) 1. One of the artificial divisions or social classes into which the Hiudus are rigidly separated according to the religious law of Brahmanism, and of the religious law of the religious law of the religious law of the religiou which the Hiudus are rigidly separated according to the religious law of Brahmanism, and of which the privileges or disabilities are transmitted by inheritance. The principal castes are four in number: 1st, the Brahmans, or the sacerdotal caste; 2d, the Kshatriyas, modern Rajputs, or military caste; 3d, the Vaisyas, or husbandmen and merchants, who have now in many districts become merged in the second and fourth castes; 4th, the Sudras, or laborers and mechanics. The Brahmans are supposed to have sprung from the mouth of Brahman the Kshatriyas from his arms, the Vaisyas from his belly and thighs, and the Sudras from his feet. The Brahman represents religion; the Kshatriyas, war; the Vaisyas, commerce and wealth; and the Sudra, labor. There are many subdivisions of caste, and although the Sudras are degraded far below the Brahmans, Kshatriyas, and Vaisyas, there are reckoned thirty-six subdivisions lower than the Sudras. Lowest of all are the Pariahs, who are supposed to be of no caste, and mere outcasts from humanity. Of the castes, the first three are the natural and gradually established divisions of the Aryan invaders and conquerors of India; the fourth was made up of the subjugated aborigines. The Sanskri name for caste is earna, color, the different castes having been at first marked by differences of complexion, according to race, and in some degree according to occupation and consequent exposure. Besides the original castes, numerous nixed classes or castes have sprung up in the progress of time, and are dependent upon trade, occupation, or profession; in fact, the essential principle in the system of caste is the confining of employments to hereditary classes. Castes are, according to Indian social standards, either "high" or "low." The same term is also used of somewhat similar classes in other countries.

The system of caste involves the worst of all wrongs to humanity—that of hallowing evil by the authority and

or no castles, properly speaking, till the time of William the Conqueror, after which a great many were constructed on the Norman model. At first the donjon or keep was the only part of the castle of great strength, and the other buildings in connection with it were of a more or less temporary nature. In the thirteenth century, however, the design of the castle became more fully developed, and the keep formed only the central part of a group of buildings, all supporting one another, and mutually contributings to the strength and commodiousness of the whole. The cut shows the castle of Coucy, near Laon, France, built in the thirteenth century. In the foreground is the outer bailey or esplanade, fortified, and containing a chapel, stables, and other buildings. The outer entrance to this was formed by a barbican or antenural (see plan under natemural), a is the foss, 20 yards broad; b, the gate, approached by two swing-bridges, defended by two gnard-rooms, and having a double portculls within, glving entrance to vaulted guard-rooms with sleeping-apartments, etc., above, c; d, inner bailey or courtyard; e, covered buildings for the men defending the walls or curtains; f, apartments for the family, entered by the grand staircase, g; h, great hall, with storerooms and vaults below; i, donjon or keep (the chapel is seen behind it), the strongest part of the castle, with walls of immense thickness, suited to form the last retreat of the garrison. At k is a postern leading from the donjon and communicating with an outer postern, drawbridge, etc.; l, m, n, o are the chief towers flanking the outer walls.

5. A kind of helmet.—6. Naut., a kind of fighting-tower formerly crected on war-galleys, etc., near the bow and stern, and called respectively forecastle and afteastle. See cut unspectively forecastle and afteastle. See cut under cadenas.—A castle in the air, or in Spain, a visionary project; a vague imagination of possible wealth, fame, happiness, or the like; a day-dream. (See below.)—To build castles in Spain, to build eastles in the air. (See below.) Theorigin of this phrase (which is traced back in French literature to the thirteenth century, and in English to the fourteenth) is doubtful. It has been attributed to the boasting by Spanish adventurers in France of their lordly residences, which existed only in their imaginations; and less probably to a supposed prohibition at some time against the erection of fortifications in Spain. Littre thinks the idea is simply that of an imaginary eastle in any foreign country, other names having been similarly used, and that of Spain prevailing as most familiar; to which may be added that its real origin is probably to be found in the notion, always prevaient, of the attainment of great wealth through emigration or foreign adventure.

communis (the castor-oil plant), a native of India, but now distributed over all the warmer regions of the globe. The oil is obtained from the seeds by bruising them between rollers and then pressing them in hempen bags in a strong press. The oil that first eomes away, called cold-drawn castor-oil, is reckoned the best; an inferior quality is obtained by heating or steaming the pressed seeds, and again subjecting them to pressure. The oil is afterward heated to the boiling-point, in order to separate the albumen and impurities. Castor-oil is used medicinally as a mild but efficient purgative. It is also used as a fixing agent in cotton-dyeing, especially in dyeing a Turkey-red color from madder. In its sapontified state it is sold under various names, as Turkey-red oil, alizarin oil, sulphated oil, soluble oil, etc.—Castor-oil plant, the plant Ricinus communis, which produces castor-oil. Sterne, Sentimental Journey, p. 53.

Casual ejector, in law, the name given to the defendant in the fictitious action of ejectment formerly allowed by the common law, where the real object of the action was to determine a title to land. To form the ground of such an action, the person laying claim to the land granted a lease of it to a fictitious person, usually designated John Doe, and an action was then brought in the name of John Doe against another fictitious person, usually designated Richard Roe (the casnal ejector), who was stated to have illegally ejected John Doe from the land which he held on lease. The landholder was permitted to defend in place of Richard Roe, and thus the determination of the action involved the proving of the lessor's right to grant a lease. This fiction is now everywhere abolished. = Syn. 1. Accidental, Chance, etc. See occasional.

In geol., an inundation or deluge, or other violent and sudden physical action of great extent, supposed to have been the tion of great extent, supposed to have been the

efficient cause of various phenomena (as of the deposition of different formations of diluvium or drift) for which the gradual action of mod-crate currents, or that of ice, is considered to have been inadequate.

This war is no accident, but an inevitable result of long-incubating causes; inevitable as the cataclysms that aweep away the monstrous births of primeval nature. O. W. Holmes, Old Vol. of Life, p. 82.

3. Figuratively, a sudden or violent action of overwhelming force and extended sweep.

In minds accustomed to philosophic thought a change of opinion does not come by abrupt catactysm, but by grad-ual development. J. R. Secley, Nat. Religion, p. 231.

Theory of cataclysms, or of catastrophes, also called the doctrine of violent uphearals, the view that there has been in geological time a succession of catastrophes which destroyed all living things, and necessitated repeated creative acts to repeople the earth. See catastrophe.

cataclysmal (kat-a-kliz'mal), a. [<a href="cataclysm">cataclysm</a> 1. Of, pertaining to, or of the nature of a cataclysm.

The question is not yet settled whether they [elevations and subsidences] were of a slow and gradual nature like some now in progress, or whether, like others that have occurred in connection with earthquakes, they may have been rapid and catactysmal,

J. W. Dawson, Nature and the Bible, p. 161.

The French Revolution has been so often lifted by sen-sational writers into the region of cataclysmal and almost superhuman occurrences, that a narrative is especially acceptable which tends to range it among the facts which sppeal to our ordinary experience.

Westminster Rev., CXXV, 568.

els, excavated in the soft granular tufa underlying the Campagna. In each wall loculi, or berth-like recesses, contained the bodies of the dead. The entrances to these were closed with slabs of stone, carefully scaled, and marked with inscriptions or rude pictures. In some cases small rooms, called *cubicula*, were set spart for families of distinction in the church, especially for martyrs. Though

these catacombs probably served to some extent as places of refuge and concealment for Christians during the carlier persecutions, the original idea of their construction was undoubtedly that they should be used only as burial-vaults. The length of the galleries in the Roman catacombs has been variously estimated at from 350 to 900 miles, and the number of bodies there interred is said to be over 6,000,000. Similar underground burial-places are found at Naples, Cairo, Paris, etc. Those of Paris are abandoned quarries extending under a large portion of the city, which were made into a bonery in 1786, when the intramural cemeteries of the city were condemmed and the bones were removed thither.

cataleptoid (kat-a-lep'toid), a. [ $\langle$  catalepsis (-lept-) + -oid.] Resembling catalepsy. catalexis (kat-a-lek'sis), n. [ $\langle$  Gr.  $\kappa a \tau a \lambda \eta \gamma \varepsilon \iota v$ , leave off: see eatalectic.] In pros., incompleteness of the last foot or measure of a verse; in a wider sense, incompleteness of any foot in a verse. Catalexia is not the suppression of any rhythmical element, but the want of a corresponding syllable or syllables in the words to fill out a time (mora) or times necessary to the metrical completeness of the line. This space is filled out by a pause—in the quantitative poetry of the Grecks and Romans, either by a pause or by prolonging the preceding syllable.

Linea therefore will be so divided into feet that the ictus shall always fall on the first syllable of each foot, admitting anacrusis and catalexis wherever necessary.

Catapult

Catapult.

Its construction is nowhere explained with any fullness, and it is uncertain whether its action was that of a cross-bow or whether springs were the propelling power. By later authors the catapult and ballista seem to be confounded. In the middle ages the name is hardly used, except where a writer is evidently seeking to give a classical form to his composition. In the annexed cut, which represents a catapult of the later period when no distinction was made between it and the ballista, F is the end of a strong lever, which revolves on an axis and is held down by a windlass, A. At the extremity is a fork, E E, with the prongs curving slightly upward so as to afford a bed for a barrel of combustible matter or a heavy missile confined by a rope with a loop at the end, the loop being passed through a hook, D. When the lever was released it bounded suddenly upward, the centrifugal force causing the loop C to slip off the hook, whereupon the barrel held on the fork was liberated and projected toward its object. B shows rings of iron, stone, or lead, intended to increase the rebound due to the stretched cables or other devices which furnished the propelling force.

Tennyson, Locksley Hall.

A disease of the eye, characterized by opa-3. A disease of the eye, characterized by opacity of the lens. It is produced in various ways, often as a senile change, being then a sclerosis of the lens. Capsular cataracts, so called, do not involve an opaqueness of the capsule of the lens itself, but of that part of the lens which is next to the capsule, or are due to a deposit of opaque matter externally upon the capsule. A secondary cataract is one due to an earlier disease of the eye. Cataracts are probably incurable except by surgical treatment. The lens is commonly entirely removed by an incision into the eye, or it is broken up with a fine needle and left to be absorbed.

The arrangement of actions or interconnection of causes which constitutes the final event of a dramatic piece; the unfolding and winding up of the plot, clearing up difficulties, and closing the play; the denouement. The ancients divided a play into the protasis, epitasis, catastasis, and catastrophe; that is, the introduction, continuance, heightening, and development or conclusion.

Pat, he comes, like the catastrophe of the eld comedy. Shak., Lear, i. 2.

All the actors must enter to complete and make up the catastrophe of this great piece.  $Sir\ T.\ Browne,\ Religio\ Medici,\ i.\ 47.$ 

The Catastrophe of the Poem is finely presaged on this ceasion.

Addison, Spectator, No. 327.

The catastrophe, indeed the whole of the last set, is beautifully written.

Gifford, Int. to Ford, p. xxix.

2. A notable event terminating a connected series; a finishing stroke or wind-up; specifically, an unfortunate conclusion; hence, any great calamity or disaster, especially one hapcat-bird pening suddenly or from an irresistible cause.

Here was a mighty revolution, the most horrible and portentous catastrophe that nature ever yet saw.

Woodward, Ess. towards a Nat. Hist. of the Earth.

He fell, but one sufferer in a common catastrophe.  $W.\ Phillips$ , Specches, p. 6.

3. In geol., an occurrence of geological importance not in harmony with preceding events, and not the result of causes acting always in a and not the result of causes acting always in a given direction; a cataclysm. It was once generally believed that the earth has "undergone a succession of revolutions and aqueous catastrophes interrupted by long intervals of tranquility" (Lyell). The deluge was one of these great catastrophes. A similar view is the once common idea that all the living organisms on the earth's surface had been again and again exterminated, to be succeeded by new creations of plants and animals.

Great changes of a kind and intensity quite different from the common course of events, and which may there-fore properly be called catastrophes, have taken place upon the earth's surface.

Whewell.

Contemporary Rev., L. 436.

2. Relating to or in conformity with the views

of the catastrophists; cataclysmal. The hypothesis of uniformity cannot possess any essential simplicity which, previous to inquiry, gives it a claim upon our assent superior to that of the opposite catastrophic hypothesis.

Whewell.

3. Subversive in a momentous degree of settled usage or law.

The catastrophic creation of Peers for the purpose of swamping the upper house is . . . a power only to be used on great occasions, when the object is immense, and the party strife immitigated.

Bagehot, Eug. Const. (Boston ed.), p. 305.

catastrophism (ka-tas trō-fizm), n. [(<atas-trophe + -ism; = F. catastrophisme.] The theoretical view of geological events which has as its essential basis the idea of a succession of catastrophes: the opposite of uniformitarianism. See catastrophe, 3, and cataclysm, 2.

I find three, more or less centradictory, systems of geologic thought, each of which might fairly enough claim these appellations, standing side by side in Britain. I shall call one of them Catastrophism, another Uniformitarianism, the third Evolutionism. By Catastrophism, I mean any form of geological speculation which, in order to account for the phenomena of geology, supposes the operation of forces different in their nature, or immeasurably different in power, from those which we at present see in action in the universe. Huxley, Lay Sermons, p. 220.

catastrophist (ka-tas'trō-fist), n. [< catastrophe catastrophist (ka-tas tro-list), n. [Actuatiophism; a cataclysmist. The term is used in geology by writers on theoretical dynamic geology as the opposite of uniformitarian, that is, of one who considers that geological causes now in action are, and have been, essentially the same from the beginning. The catastrophist maintains that there have been catastrophes, or sudden violent changes in the order of nature, such, for instance, as would cause the extermination of all forms of life upon the globe, or cover it with ice.

The catastrophist is affirmative, the uniformitarian is negative in his assertions. Whewell.

For a generation after geologists had become uniformitarians in Geology, they remained catastrophists in Biology.

 In logic, a highest notion, especially one derived from the logical analysis of the forms

derived from the logical analysis of the forms of proposition. The word was introduced by Aristotle, who applies it to his ten predicaments, things said, or summa genera, viz., snbstance, quantity, quality, relation, action, passion, where, when, posture or relative position of parts, habit or state. These are derived from such an analysis of the proposition as could be made before the developed study of grammar. The categories or highest intellectual concepts of Kant are: categories of quantity—unity, plurality, totality: categories of quality—reality, negation, limit between these; categories of relation—substance and accident, cause and effect, action and reaction; categories of modality—possibility, impossibility, actuality, non-actuality, necessity, non-necessity. Modern formal logic furnishes this list: (1) qualities, or singular characters; (2) simple relations, or dual characters; (3) complex relations, or plural characters. Many lists of categories have been given not founded on formal logic.

1. Properly, the larva of a lepidopterous insect, but also applied to the larva of other insects, such as members of the family tenthredinides, or saw-flies. Caterpillars are produced other insects, such as members of the family Tenthredinide, or saw-flies. Caterpillars are produced Tenthredinida, or saw-flies. Caterpillars are produced Immediately from the egg; they are furnished with three pairs of true feet and a number of fleshy abdominal legs named protegs, and have the shape and appearance of a worm. The old idea of Swammerdam that the pupa and image are already concealed under the skin of the caterpillar is only partially founded in truth. The pupal skin is formed from the hypodermis of the larva, and the muscles contract and change its form. The larval skin is then thrown off, and the lneact remains quiescent for some time, the image or perfect lusect forming beneath the pupal envelop. Caterpillars generally feed on leaves or succulent vegetables, and are sometimes very destructive. See larva. 2. A cockchafer. [Prov. Eng.]—3‡. cauciont, n. [This word originated in Boston, Massachusetts. According to a com-

men account it is a corruption of calkers' meeting, a term said to have been applied in derision by the Tories to meetings of citizens, among whom were calkers and ropemakers, held to protest against the aggressions of the royal troops, and especially against the "Boston Massacre" of March 5th, 1770. But such a corruption and forgetfulness of the orig. meaning of a word so familiar as calkers is improbable, and, more-over, the word caucus occurs at least 17 years earlier, in the following passage in the diary of John Adams: "Feb. . . . , 1753—This day found that the *Caucus* Club meets at certain times in that the Caucus Cinb meets at certain times in the yard of Tom Dawes, adjutant of the Boston (militia) regiment." This indicates the origin of the term caucus, as a private meeting for political purposes, in the name of a club of that nature, called the "Caucus Club." The origin of the name as applied to the club is not known, but if not an arbitrary term, chosen for its allitrative form and followed the club is not known, but if not an arbitrary term, chosen for its alliterative form and feigned mysterious import, it may have been a learned adoption, in allusion to the convivial or symposiac feature of the club, of the ML. caucus, ζ MGr. καῦκος (also καῦκη, καῦκη, with dim. κανκίον), a cup.] 1. That by the power of which an event or thing is; a principle from which an effect arises; that upon which something depends per se; in general, anything which stands to something else in a real relation analogous to the mental relation of the antecedeut to the cousequent general, anything which stands to something else in a real relation analogous to the mental relation of the antecedeut to the cousequent of a conditioual proposition. Nominalist philosophers commonly hold that every effect is the result not of one but of many causes (see total cause, below); but the usual doctrine is that the effect is an abstract element of a thing or event, while the cause is an abstract element of an antecedent event. Four kinds of causes are recognized by Aristotelians: the material, formal, efficient, and final cause. Material cause is that which gives being to the thing, the matter by the determination of which it is constituted; formal cause, that which gives the thing its characteristics, the form or determination by which the matter becomes the thing; efficient cause, an external cause preceding its effect in time, and distinguished from material and formal cause by being external to that which it causes, and from the end or final cause in being that by which something is made or done, and not merely that for the sake of which it is made or done; final cause, an external cause following after that which it determines (called the means), the end for which the effect exists. Other divisions of causes are as follows: subordinate or second cause, one which is itself caused by something else; first cause, that which is not caused by anything else; proximate or immediate cause, one between which and the effect no other cause intervenes, or, in law, that from which the effect might be expected to follow without the concurrence of any unusual circumstances; remote cause, the appropriate opposite of proximate cause; total cause, the aggregate of all the antecedents which suffice to bring about the event; partial cause, come thing which tends to bring about an effect, but only in conjunction with other causes; emanative cause; that which brings about some effect might itself; as the mind calling up an image; transient cause, that which is self-determined and free to act or not act: opposed to ne

pal cause, facilitating the production of the effect; the programmal cause is that within the principal cause which either predisposes or directly excites it to action; and the symectic, containing, or continent cause is the essence of the disease itself considered as the cause of the symptoms; thus typhoid fever might be referred to as the continent cause of ocher-stools or a quickened pulse. Other varieties are the occasional cause (see occasionalism); moral cause, the person inciting the agent to action; objective cause, the ideas which excite the imagination of the agent; and sufficient cause, one which suffices to bring about the effect (see sufficient reason, under reason).

In virtue of his character as knowing, therefore, we are

Specifically: Q. Assenteed earlier and more intimate.

Specifically -2. An antecedent upon which an effect follows according to a law of nature; an effect follows according to a law of nature; an efficient cause. The common conception of a cause, as producing an effect similar to itself at a later time and without essential reference to any third factor, is at variance with the established principles of mechanics. Two successive positions of a system must be known, in addition to the law of the force, before a position can be predicted; but the common ides of a cause is that of a single antecedent determining a consequent of the same nature. Moreover, the action of a force is strictly contemporaneous with it and comes to an end with it; and no known law of nature coördinates events separated by an interval of time.

Cebidæ (seb'i-dē), n. pl. [NL., < Cebus + -idæ.]
A family of new-world monkeys, the platyrrhine simians, distinguished by their dentition from the old-world monkeys, having one tion from the old-world monkeys, having one premolar more on each side of each jaw than the latter, or 36 teeth in all. The nose is flattened and has a broad septum, thus rendering the nostrils proportionally discrete; the bony meatus of the external ear is reduced to an annular tympanic bone; the thumb is undeveloped, or not perfectly apposable; the tail in most cases is prehensile; and both check-pouches and ischial callosities are absent. In current usage all American Quadrumana except the marmosets, or Midide, are included in the Cebide. They are divided into the subfamilies Mycetinæ, Cebinæ, Nyctipithecinæ, and Pithecünæ. There are eleven living genera, and the species are numerous.

mode of life, the peculiar structure exhibited in the larvæ, and the economic importance attached to several species. In most cases the female lays her eggs in the atema, leaves, or buds of various plants, producing gail-like excrescences of various forms, inhabited by the larvæ. These are subcylindrical, legless grubs, mostly of a reddish or yellow color, and are furnished on the ventral side of the thoracic joints with a corneous plate, usually forked, called the breast-bone. Some species, however, do not produce galls, and among these the most familiar are the Itessian-fly and the clover-seed midge, C. leguminicola (Lintner), which latter infests the seeds of elover, causing great damage in the more northern parts of the United States. 2. The name given, usually with qualifying terms, to various coniferous trees, chiefly North American, and of genera nearly allied to Cedrus. The white cedar of the eastern United States is the Chamecyparis sphæroidea, of swamps near the coast, and also

cede
the arbor-vitæ, Thuya occidentalis; on the Pacific coast it is the Libocedrus decurrens (also known as bastard, post, or incense cedar), and also Chamæcuparis Lawsoniana, the Pert Orford or Oregon cedar. The red cedar is usually the Juniperus Virginiana, the odorous wood of which is often called pencil-cedar, from its extensive use in the manufacture of lead-pencils; west of the Rocky Mountains the red cedar is the Thuya gigantea, also called canoe-cedar. The cedar of Bernuda and Barbados is Juniperus Bernudiana; the Japan cedar, Cryptomeria Japonica. The stinking cedars of the United States are species of Torreya. The Himalayan cedar is the Juniperus excelsa; its wood resembles that of the pencil-cedar, but is harder, and has less of its peculiar odor. Washington cedar is the big-tree of California, Sequoia gigantea. The wood of most of theae trees is soft, fine-grained, of a reddish color, and often fragrant. often fragrant.

3. A name popularly given in tropical regions to a considerable number of trees, mostly of the natural order Meliacew, in no way related the natural order Meliaceae, in no way related to the preceding. That known variously as the West Indian cedar, the hastard or sweet-scented Barbados cedar, the Jamaica red cedar, and the Spanish, Havana, or Honduras cedar is the Cedrela odorata. The cedar of India and New South Wales is C. Toona; the red cedar of India, Soymida febrifuga; and the bastard cedar of India, Melia Azedarach. (See azedarach.) The white cedar of Australia is M. composita, and the red cedar Flindersia australis. Among trees of other orders, the bastard cedar of the West Indies is Guazuma tomentosa or G. ulmifolia; the white cedar of Guiana, Protium altissimum; and the white cedar of Dominica, Bignonia Leucoxyton. In India the name red cedar is sometimes given to the exphorbiaceous Bischoffia Javanica.

4. In arch. See cella, 1.-5. In biol.: (a) The fundamental form-element of every organized fundamental form-element of every organized body. It is a bioplastic mass of protoplasm, varying in size and shape, generally of microscopic dimensions, capable under proper conditions of performing the functions of sensation, nutrition, reproduction, and automatic or spontaneous motion, and constituting in itself an entire organism, or being capable of entering into the structure of one. Such a cell as a rule has a nucleus, and is usually also provided with a wall or definite boundary; but neither cell-nucleus nor cell-wall necessarily enters into its structure. In ultimate morphological analysis, all organized tissue is resolvable into cells or cell-products. See protoplasm, and cell theory, below. (b) Specifically, a nucleated capsulated form-element of any struccleated capsulated form-element of any structure or tissue; one of the independent proto-plasmie bodies which build up an animal fab-

ric; a body consisting of cell-substance, cell-wall, and cell-nucleus: as, bone-cells, cartilage cells, muscle-cells, nerve-cells, fat-cells, cells of connective tissue, of mucous and serous membrane, etc., of the blood, lymph, etc. This is the usual character of cells in animals, and is the ordinary technical anatomical sense of the word. If a single cell, under appropriate conditions, hecomes a man in the space of a few years, there can surely be no difficulty in understanding how, under appropriate conditions, a cell may in the course of untold millions of years give origin to the human race.

8. In elect., a single jar or element of a voltaic battery. A simple cell ordinarily consists of plates of two different metals joined by a wire and immersed in a liquid (called the exciting liquid) which acts chemically upon one plate; this, the positive or generating plate, at the expense of which the electrical current is maintained, is usually zine; the negative plate is often copper, but may be platinum, carbon, silver, etc. The exciting liquid is commonly dilute sulphuric acid, but solutions of sal ammoniac, common salt, etc., are also used. The current flows through the liquid from the positive plate (zine) to the copper, and through the wire from the positive pole to the negative pole. (See figure.) The current from a simple voltaic cell soon loses its strength, because hydrogen bubbles, liberated in the chemical action on the negative plate (see polarization of the negative plate (see polarization) as in the life plate (see polarization) of the negative plate (see polarization) of the negative plate (see polarization) as in the life platinum, as in the since cell, or potte-cell, by using platinum, as in the smee cell, or potte-cell, by using platinum, as in the smee cell, or potte-cell, by using platinum, as in the smee cell, or potte-cell, by using platinum, as in the smee cell, or potte-cell, by using platinum, as in the smee cell, or potte-cell, or bottle-cell, by using platinum, as in the smee cell, or bottle-cell, by using platinum, as in the smee cell, or bottle-cell, by using platinum, as in the smee cell, or bottle-cell, by using platinum, as in the smee cell, or bottle-cell, by chromate of potash is mixed with the sulphuric acid (being hence called a bichromate cell) in a vessel of bottle-form, and the zinc and carbon are immersed in them; the zinc, however, is raised ont of th 8. In elect., a single jar or element of a voltaic

the best of these is the Daniell cell, which consists of a zine plate immersed in dilute sulphuric acid contained in a porous vessel, outside of which is a perforated copper plate surrounded by a solution of copper sulphate. The action between the zinc and sulphuric acid produces zinc sulphate and hydrogen; the latter, however, instead of collecting on the copper plate, unites with the copper sulphate, forming sulphuric acid and metallic copper. The former goes to keep up the supply of acid in the inner vessel, and the latter is deposited on the copper plate. The consumption of copper sulphate is made good by a supply of crystals in a receptacle at the top. A modified form of the Daniell cell is the gravity cell, in which the porous vessel is done away with, and the two liquids are separated by their specific gravities; the copper sulphate surrounds the copper plate at the bottom, and the zinc sulphate the zinc plate at the top. This is the form of cell most used for telegraphic purposes in the United States. Other forms of the compound cell are the Grore, in which platinum and nitric

acid take the place of the copper and copper sulphate of the Daniell; the *Bunsen*, which is like the Grove except in the use of carbon

instead of platinum; and there are many others. The Leclanché cell, much used in connection with electric call-bells (as also with the telephone), consists of a rod of zinc inmersed in a solution of sal ammoniac, and a plate of carbon, sometimes, though not necessarily, in instead of plati-num; and there times, though not necessarily, in a separate por-ous vessel packed about with pow-dered manganese dioxid and earhor

Its strength, and hence is especially valuable for intermittent use; it has also the advantage that there is no waste of the zinc by local action when not in use, The silver-chlorid cell, as devised by De la Rue, consists of zinc acted upon by sal ammoniac and a rod of silver surrounded by a cylinder of silver chlorid. The Latimer-Clark standard cell consists of zinc and pure mercury separated by a paste made from sulphates of zinc and mercury; when suitably arranged it maintains a very constant electromotive force, and hence has been used as a standard.

Cellulares (sel-ų-lā'rēz), n. pl. [NL., pl. of cellulars: see cellular.] In De Candolle's system of classification, a name given to that di-

tem of classification, a name given to that division of the vegetable kingdom more usually called Cryptogamia, including plants which are formed wholly or chiefly of cellular tissue. Strictly limited, it should include only the mosses, Hepatieve, and lower cryptogams.

Cellularia (scl-ū-lā'ri-ā), n. pl. [NL. (Cuvier), neut. pl. of cellularis, cellular: see cellular.]

1. In Cuvier's system of classification, the second family of the Corallifera, defined as having each polyp adhering to a horny or calcareous cell with thin walls, and no apparent connection with one another except by a very thin cpidermis or by pores in the walls of the cells. [Not in use.]—2. [Used as a singular.] The typical and only genus of the family Cellularida. C. peachi is an example.

idw. C. peachi is an example.

Cellulariidæ (sel#ā-lā-rī'i-dē), n. pl. [NL., ⟨
Cellularia, 2, + -idæ.] A family of chilostomatous polyzoans, typified by the genus Cellu-

laria. The polyzoary is erect, jointed, phytoid, dichotomously branched, with zoocia alternate and all facing the same way, the apertures large, oval, and membranous, and the avicularia, when present, sessile, and either lateral or anterior. Also Cellularidæ, Cellularidæ.

Cellularina (sel\* "ū-lā-rī'nā), n. pl. [NL., < Cellularina, 2, + -inā².] A superfamily group of chilostomatous polyzoans, having the zoœcium corneous and infundibulate. It contains the families Ateidæ, Cellularidæ, and Biccilaridæ.

cellulated (sel\* "ū-lā-ted), a. [< cellula+-ate²+-ed².] Having a cellular structure.

cellula (sel\* "ū), n. [= F. cellulæ = It. cellula, < L. (NL.) cellulæ: see ecllulæ.] A little cell. Specifically—(a) In entom., one of the little spaces, aurrounded by veins, on the wing of an insect, especially of the Neuroptera and Pseudomeuroptera. (b) In bot, one of the cells which constitute the arcolar structure of a moss, or of a leaf or similar vegetable organ.

Cellulicolæ (sel-ū-lik\* [ō-lē), n. pl. [NL., < cellula, q. v., + L. colere, inhabit: see cult.] A group of spiders, of the order Pulmonaria, which form their nests in slits beneath the bark of trees in the cavities of stones and rocks, or in the cavities of stones and rocks.

[ $\zeta$  cellul(ose<sup>2</sup>) + -oid.] A substance made of guncotten, camphor, and some other ingredients, imitating ivory, or, when colored, tortoise-shell, coral, amber, malachite, etc. Many articles, useful and orna-

of the primary wall-memorane of all cells, a secretion from the contained protoplasm, isomerous with starch in its composition, and allied to starch, sngar, and innlin. It rarely or never exists in a simple condition inmixed with coloring or mineral matters, etc.; and with age it becomes largely transformed into lignin, suberin, or muclage. Cotton and the bleached fiber of flax and hemp are nearly pure cellulose, and in some filter-paper it is almost chemically pure. Cellulose is remarkable for its insolubility, being dissolved without change only by an ammoniacal solution of oxid of copper, from which it may be again precipitated. Under the action of concentrated or boiling acids, or of caustic alkalis, many different products are obtained, according to the method of treatment. It is changed to glucose by long boiling with dilute sulphuric or hydrochloric acid; a substance resembling parchment is obtained by treating unsized paper with cold sulphuric acids; cronyerts forms of cellulose into guncotton, etc. In its unchanged condition it is not colored by iodine except usually with a faint yellowish tint, which becomes a bright blue on the addition of strong sulphuric acid. Cellulose is also said to exist in the tunics of Ascidia and in other invertebrates.—Starch-cellulose, the delicate skeleton of cellulose which remains when starch-grammles are dissolved in saliva or pepsin.

II. a. Formed of cellulose.

II. a. Fermed of cellulose.

cellulosic (sel-ū-lō'sik), a. [< eellulosc2 + -ic.] Of or relating to cellulose; produced by or made of cellulose: as, "cellulosic fermentation," Nineteenth Century.

among primitive and uncivilized foraces, and having the general form of a chisel or an ax-blade. In the eighteenth century the name was given to the stone and bronze Implements of this general shape, without careful consideration of their probable uses. The atone celts are all of a form more or less closely resembling the head of a hatchet, differing only in being sometimes flatter and with a longer cutting edge, sometimes of a section nearly circular, pointed at one end, and coming abruptly to an edge at the other. The bronze celts, the forms of which are very varied, may be divided into three principal classes: First, chisel-shaped blades without sockets, but with raised rims on each side forming a pair of grooves, apparently intended to retain a wooden handle fitted on in the direction of the length of the blade; these may be considered as spades intended for agricultural labor. Second, chisel-shaped blades, having a deep socket at the end opposite the cutting edge, and usually fitted with a loop or pierced ear on one side. Third, blades, also with a socket, bat shorter and broader; these, which have often been called ax-heads, are thought rather to be ferrules for the butt-end of spear-shafts and the like, the edge enabling them to be driven into the ground. See amgarn, paal-stab, pot-celt, and socket-celt.

cembalo (sem'ba-lō), n. [It., orig. a cymbal: see cymbal.]

1. A musical instrument of the harp family; a dulcimer. Formerly a general name for many instruments having several wire strings which were struck with hammers. The term doubtless is derived from the bell-like tone thus produced.

2. Such an instrument played by means of keys or digitals; a harpsichord, and, later, a pianoforte or organ keyboard: short for elavicembalo.

1. Any composition which at one temperature or one degree of moisture is plastic and at another is tongelous.

or one degree of moisture is plastic and at auor one degree of moisture is plastic and at another is tenacious. Cements are used for uniting materials of the same kind or of different kinds, or for forming smooth and impervious surfaces or coatings. The term properly includes papier-maché, gums, glues, mucliages, limes, mortars, and a great number of compounds of such nature as to admit of their assuming, under certain conditions, sticky, tenacious, or stone-like consistency. Cements are divided into classes, according to their use, as glasscement, etc. The materials forming the cement are mixed with water, acids, oils, etc., to a paste, and applied to the surfaces to be joined together or coated, and then dried; or, either wet or dry, are applied hot, or are applied and then heated, when they become hard and tenacious. This hardening is called the "setting" of the cement. The cements in use in the arts are exceedingly numerous, and are composed of a great variety of materials.

Specifically-2. A kind of mertar which sets or hardens under water: hence often called or hardens under water: hence often called hydraulie cement. It is, however, olten used in superior masonwork not intended to be covered by water. There are two kinds of cement well known in Europe, Portland and Roman. Portland sement (named from its resemblance in color to Portland stone) is made from selected materials, commonly chalk and river-mud or alluvial clay. Roman cement (unknown to the Romans, but deriving its name from a supposed resemblance to Roman mortar) was originally made of volcanic ashes, but is now more often made from unaterials obtained from the Jurassic series of rocks. Much of the cement used in the United States is that known as Rosendate. See cement-stone.

3. A name sometimes given by placer and hydraulic miners to any rather firmly compacted mass of detrital auriferous material. Usually, however, the application of the word is limited to detrital material of volcanic origin, consisting of fragmentary substances mixed with ashes and caused to cohere somewhat firmly by pressure, or by silicious or calcarenus matter.

cementation (sem-en-tā'shon), n. [< ccment + -ation.] 1. The act of cementing; the act of uniting by an adhesive substance.—2. A metalhurgical process in which two substances are heated in contact for the purpose of effecting some important chemical change in one of them. Iron may be carburized or decarburized by cementation. Thus, bar-iron, embedded in charcoat-powder and exposed to a temperature above redness, is gradually converted into steel, and in this way steel was formerly made in large quantity. This is carburization by cementation. Again, if east-iron be embedded in the powder of red hematite and kept for some time at a red heat, it is decarburized, and acquires a considerable degree of maileability. This is the method in use for producing what is known as malleable cost-iron. Malleable iron is also converted into steel by keeping it immersed in molten pig-iron. This is a very ancient process, and is a kind of cementation. Silver is also separated from gold by cementation with salt and with potassium nitrate. These last methods of separation of the two precious metals are also very ancient, but are now nearly obsolete. See case-hardening.

cement-stone (sē-ment'stōn), n. Any rock which is capable of furnishing cement when properly treated. Most of the rock used in the United States for cement comes from the Tentaculite division of the Lower Helderberg series, and the product takes the name of Rosendale eement from the town of Rosendale in Ulster county, New York, where it is chiefly worked. The rock which furnishes cement is a more or less impure limestone, or mixture of carbonate of lime with sand and clay. Pure limestone will not make a mortar which will set under water; but some magnesian limestones have hydraulic properties. The theory of the hydraulicity of cement is not clearly understood, although much has been written in regard to it. Also cement-rock.

Censers are now usually made of metal in the shape of a cup with a perforated cover, and contain burning charcoal or other material capable of producing sufficient heat to burn the fragrant gums used as incense. The censer is swung in the hand by chains. In ancient Roman usage incense was carried to the altar in a square box called an acerra, from which it was taken and sprinkled on the flame. A similar practice prevailed among the Greeks. The ecclesiastical term for a censer is thurible. The only distinct biblical precepts regarding the use of the censer are found in Num. iv. 14 and Lev. xvi. 12. According to Bingham, neither incense nor censers were used in the Christian church during the first three centuries. censorship (sen'sor-ship); n. [\lambda censor + -ship.]
The office or dignity of a censor; the time during which a censor holds his office.— Censorship of the press, a regulation which formerly prevailed in most countries of Europe, and is still in force in some, according to which manuscripts, printed books, pamphlets, plays, and newspapers are examined by officials, civil or ecclesiastical, appointed for the purpose, who are empowered to prevent publication or suppress any parts of the text if they find anything in such books or writings obnoxious to the prevailing political or religious system. A general censorship of the press was established by the Roman Catholic Church as early as 1515, and is still enforced so far as its authority extends. In England there were "licensers" of books, who were for the most part bishops; a general system of censorship, established by a decree of the Star Chamber in 1637, remained in force during the civil war, and was confirmed by act of Parliament in 1643. Against this act Milton protested in his "Arcopagitica: a speech for the liberty of Unlicensed Printing." The censorship, or license system, was abolished in England in 1694. In France a general censorship of the press existed from the introduction of printing till 1789, when it was abolished and still exists. In Russia there is a very rigid censorship of the press. In Spain the censorship was abolished and still exists. In Russia there is a very rigid censorship of the press. In Spain the censorship in Norway, Sweden, Denmark, the Netherlands, or Belgium, but penalties are imposed upon those who offend through the press. In the United States the press is, and always has been, absolutely free from any form of political or ecclesiastical censorship.

cficially; it is the act of one having authority. To censure is to express an unfavorable opinion; it is less personal than the previous terms. Remonstrate with and expostulate with are more argumentative and imply more of advice than either reprove or censure; they also apply only to acts now taking place or about to take place, while censure applies only to what is past. To reproach a person is to lay blame upon him in direct address, and with feeling, to endeavor to shame him with what he has done. The words advance in the degree of likelihood that the person reproved, etc., does not admit the fault for which he is taken to task. See the distinction of corresponding nouns under admonition.

1. Consisting of a hundred degrees; graduated into a hundred divisions or equal parts: often placed after the noun which it qualifies, like troy, avoirdupois, etc.—2. Pertaining to the scale which is divided into a hundred degrees:

as, a centigrade degree.

Its abbreviation is C.: as, 35° C.

Centigrade thermometer, a thermometer introduced by Celsius, and universally used by physicists, which divides the interval between the freezing- and boiling-points of water into 100°, the zero of the centigrade thermometer being placed at the freezing-point. Five degrees centigrade are equivalent to 9° Fahrenheit, and the point marked 10° on the centigrade scale corresponds to the point marked 50° on the Fahrenheit scale. The simplest rules for reducing a temperature noted on one scale to the corresponding number of degrees in the other are as follows: To reduce a temperature on the centigrade scale to Fahrenheit.—Subtract 10° from the given temperature, subtract from the remainder one tenth of itself, double the last remainder, and add 50° to the product. To reduce a temperature on the Fahrenheit scale to centigrade—Subtract 50° from the given temperature by 10, divide the product by 9, and add 10° to the last quotient. See thermometer.

Centriscide. (sen-tris'i-dē), n. pl. [NL., \( Cen-triscus + -ide. \)] 1. A family of hemibranchiate fishes, typified by the genus Centriscus, having a short ovate body with bony plates in front and on the back, the mouth drawn out into a long tubular snout, a small spinous dorsal fin, and the ventrals near the middle of the abdomen with a spine and 7 rays each. These fishes are variously known as sea-snipe, snipe-fishes, and twoodcock-fishes, in consequence of the length of the beak. The body is compressed, and covered with small rough scales; there is no lateral line; hony strips are found on the side of the hack, sometimes confluent into a shield, and other bony strips occur on the margin of the thorax and abdomen. There are no teeth. The gill-openings are wide, and the branchiostegals are 4 in number. Of the two dorsal fins, the first bears 4 to 7 spines, the second of which is very long and strong, and the soft dorsal is of moderate size, like the anal; the pectorals are short; the caudal is emarginate, and its middle rays are not produced. The family is also and more properly called Macrorhamphosidæ.

Now that the extended study of comparative anatomy and embryonic development is largely applied to the elucidation of the human atructure, it is very desirable that descriptive terms should be sought which may without ambiguity indicate position and relation in the organism at once in man and [other] animals. Such terms as eephalic and candal, dorsal and ventral, are of this class, and ought, whenever this may be done consistently with sufficient clearness of description, to take the place of those which are only applicable to the peculiar attitude of the human body.

Cephalopoda (sef-a-lop'ō-dä), n. pl. [NL., ζ Gr. κφαλή, head, + πους (ποδ-) = E. foot.] A class of the Mollusca, the highest in organization in that division of the animal kingdom, characterized by having the organs of prehendral characterized by having the organs of prehension and locomotion, called tentacles or arms, attached to the head. They are divided into two sections, Tetrabranchiata and Dibranchiata. The nantilus and the tossil genera Orthoceras, Ammonites, Goniatites, etc., belong to the Tetrabranchiata, in which the animal has an external shell. The dibranchiate group includes the argonaut, the octopus or eight-armed cuttlefish, and the ten-armed forms, as the calamaries, the fossil belemites, etc. The shell is in all these internal, in some radimentary, but the female argonautids develop an eggcase as a sort of external papery shell. The fossil Cephalopoda are multitudinous. See cuts under Dibranchiata and Tetrabranchiata, (cef.a-lop/5-den), a, and v. [6]

II. n. The ceratoglossus.

II. n. The ceratoglossus. forms the terminal portion of the greater cornu of the hyoid, the hypobranchial and ceratobranchial together forming the so-called thyrohyal, which curves up behind the skull. In fishes it contains on its convex margin most of the gill-filaments, and on the concave one most of the rakers. Now called epithranchial.

2. In later nomenclature, same as the apohyal of some authors and the hypobranchial of Owen. ceratobranchiate (ser"a-tō-brang'ki-āt), a. [< Ceratobranchia + -atcl.] Of or pertaining to the Ceratobranchia.

ceratocele (ser'a-tō-sēl), n. f (Gr. κέρας (κερατ-), horn,  $+\kappa\hat{\eta}\hat{\rho}\eta$ , a tumor.] In pathol., hernia of the cornea, or protrusion of the membrane of Descemet, with more or less of the inner corneal layers, through an opening in the outer corneal layers. Also keratocele.

ceratocricoid (ser"a-tō-krī'koid), a. and n. [< ceratocricoidcus.] I. a. In anat., connected with the inferior cornu of the thyroid cartilage

and with the cricoid ring.

II. n. An occasional muscle of the human larynx, connected with the posterior crico-arytenoid muscle, passing from the cricoid ring to the inferior cornu of the thyroid cartilage. Also keratocricoid.

ceratocricoideus (ser"a-tō-kri-koi'dē-us), n.; pl. eeratocricoidei (-ī). [NL., < cerato- + cricoideus.] The ceratocricoid muscle. Also keratocricoideus.

Ceratoda (ser-a-tō'dā), n. pl. [NL., ⟨ Gr. κερα-τώδης: see ceratode.] The horny or fibrous sponges; the Ceratospongiæ or Fibrospongiæ. See Ceratoidea. Also written Keratoda.

**ceratode** (ser a-tōd), n. [⟨ Gr. κερατώδης, contr. of κερατοειδής, horn-like, ⟨ κέρας (κερατ-), horn, + είδος, form.] The horny or fibrous skeletal substance of sponges. Also ceratose, keratode.
We have heard that keratode was found in the invagina-

tions of the ectoderm [of certain sponges].

Hyatt, Proc. Bost. Soc. Nat. Hist., 1884, p. 82.

Ceratodidæ (ser-a-tod'i-dē), n. pl. [NL., < ceratohyoideus (ser"a-tē-hī-oi'dē-us), n.; pl. Ceratodus + -idæ.] A family of dipnoans, or so-called mudfish, characterized by possessing but one lung, and so considered to represent a suborder, Monopneumona, of the order Dipnoi.

so-called mudnsh, characterized by possessing but one lung, and so considered to represent a suborder, Monopneumona, of the order Dipnoi. Also called, more correctly, Ceratodontidæ. ceratodon (se-rat'g-don), n. [NL., ζ Gr. κέρας (κερατ-), horn, + ὁδοίς (ὁδοντ-) = Ε. tooth.] 1+. An old name of the narwhal: so called from the born-like tusk.—2. [cap.] The genus of narwhals: now called Monodon. Brisson, 1756; Illiuer. 1811.

εράτων, Illiger, 1811.

1. Pl. ceratodont (se-rat'o-dont), a. and n. I. a. Having the characters of the Ceratodontida.

II. n. A fish of the genus Ceratodus or family Ceratodontida.

ceratodontid (ser "a-to-don'tid), n. A fish of

ceratodontid (ser"a-tō-don'tid), n. A fish of the family Ceratodontidæ.

Ceratodontidæ (ser"a-tō-don'ti-dē), n. pl. [NL., < Ceratodus (-odont-) + -idæ.] A family of dipnoöus fishes, represented by the genus Ceratodus. See Ceratodidæ.

ceratodus. See Ceratodidæ.

ceratodous (se-rat'ō-dus), a. [< ceratode + -ous.] Consisting of ceratode; ceratofibrous, as the skeleton of a sponge.

Ceratodus (ser'a-tō-dus), n. [NL. (Agassiz, 1838), < Gr. κέρας (κερατ-), horn, + δόοις (δόοντ-) = E. tooth.] The typical genus of the family Ceratodontidæ: so called from the horn-like ridges of the teeth. Ceratodus forsteri is the barramunda todontidæ: so called from the horn-like ridges of the teeth. Ceratodus forsteri is the barramunda of Australia, sometimes called the native salmon. It is from 3 to 6 feet long, and its body is covered with eyeloid scales. The head is wide and bony, the dorsal and anal fins are confinent with the candal, and the pectoral and ventral paddle-like, but pointed at the ends. The dentition is especially characteristic; in each jaw is a lateral molar with transverse ridges diverging outward, and in advance of the palatal ones are incisor-like teeth. The family is remarkable for its antiquity, having survived from the triassic and Jurassic periods to the present time. In the early ages it was widely distributed, but it is now represented by only one or two fresh-water species in Australia.

ceratofibrous (ser"a-tō-fi'brus), a. [ $\langle$  Gr.  $\kappa k$ - $\rho a c$  ( $\kappa \epsilon \rho a \tau$ -), horn, + fibrous.] Consisting of horny fibers, as the skeleton of most sponges.

ceratogenous (ser-a-toj'e-nus), a. [⟨Gr. κέρας (κερατ-), horn, + √\*γεν: see -genous.] Producing horn or a horny substance: as, cerato-

genous cells. Also keratogenous.

ceratoglobus (ser"a-tō-glō'bus), n. [NL., ζ Gr. κέρας (κερατ-), horn, + L. globus, ball.] Same as buphthalmos.

**11.** n. The ceratoglossus.

ceratoglossus (ser a-tō-glos'us), n.; pl. ceratoglossi (-ī). [NL., ζ Gr. κέρας (κερατ-), horn, + γλῶσσα, the tongue.] In anat., that portion of the hyoglossus which arises from the greater cornu

nyoglossus which arises from the greater cornu of the hyoid bone in man. It is sometimes described as a distinct muscle. Albinus.

Macgillivray. (d) In fishes, the chief element of the branchiostegal arch, which bears most of the branchiostegal rays.

Ceratohyla (ser"a-tō-hī'lā), n. [NL., < Gr. κέρας (κερατ-), horn, + Hyla.] A genus of arciferous salient batrachians, of the family Hemiphractidæ, having a well-ossified skull developing horn-like processes, whence the name. C. bubalus is an example.

ceratohyoid (ser atō hī'oid), a. and n. [⟨NL. ceratohyoideus, ⟨Gr. κέρας (κερατ-), horn, + NL. hyoideus: see hyoid.] I. a. Pertaining to or connected with the horns of the hyoid bone: as, a ceratohyoid muscle.

II. n. The ceratohyoideus.

ceratoid (ser'a-toid), a. [= F. cératoïde, ζ Gr. κερατοειόης, horn-like; see ceratode.] 1. Horn-like; horny.—2. Fibrous or horny, as a sponge; specifically, belonging to the Ceratoidea.

Also keratoid. Ceratoidea (ser-a-toi'dē-ā), n. pl. [NL., ζ Gr. κερατοειδής, horn-like: see ceratode.] The horny sponges or Ccratoda; in Hyatt's system, the third order of the second class, Carneospongia,

of the *Poriferata* or sponges; the true horny sponges, whose skeleton consists of ceratode, forming a network in the mosoderm. They are the only sponges of practical importance and commercial value. They are usually found on rocky ground or coral-rects at a depth of not more than 75 fathoms. Also Kera-

ceratomandibular (ser a-tō-man-dib'ū-lār), a. [< NL. eeratomandibularis, < Gr. κέρας (κερατ-), horn, + LL. mandibula, a mandible.] Pertaining both to a portion of the hyoid bone and to the mandible: as, the eeratomandibular muselo as reptiles of reptiles.

of reptiles.
ceratome (ser'a-tōm), n. [⟨ Gr. κέρας (κερατ-),
horn (cornea), + τομός, eutting, ⟨ τέμνειν, ταμεῖν,
eut.] An instrument for dividing the transparent cornea in the operation for entaract by
extraction of the lens. Also keratome.
Ceratonia (ser-a-tō'ni-a), n. [NL., ⟨ Gr. κερατωνία, also κερατέο, the caprola-

Ceratonota (ser"a-tō-nō'tii), n. pl. [NL., neut. pl. of ceratonotus: seo ceratonotous.] A division of non-palliate or nudibranchiate opisthobranchiate gastropods, having the ctenidia atrophied and replaced by cerata which serve as gills, as the sea-slugs of the family *Eolidæ*. ceratonotal (ser#a-tō-nō'tal), a. [As ceratonot-ous + -al.] Having cerata or false gills on the back not-broughtest provided to

not-ous + -al.] Having cerata or false gills on the back; notobranchiate; specifically, of or pertaining to the Ceratonota.

ceratonotous (ser \*a - tō - nō ' tus), a. [⟨ NL. ceratonotus, ⟨ Gr. κέρας (κερατ-), a horn, + νῶτος, back.] Same as eeratonotal.

ceratonyxis (ser \*a - tō - nik ' sis), n. [NL., ⟨ Gr. κέρας (κερατ-), horn, + νύξις, a puncturing.] In surg., the operation of removing a cataract by thrusting a needle through the corner of the thrusting a needle through the corner of the eye and breaking up the opaque mass. Also keratonyxis.

keratonyxis.

Ceratophrys (ser-a-tof'ris), n. [NL. (Boie), < Gr. κέρας (κερατ-), ĥorn, + ὁφρίς = E. brow.] A genus of arciferous salient batrachians, of the family Cystignathida, containing toads with a horn-like process over the eye, whence the name. The Brazilian C. fryi is an example.

Ceratophthalma (ser "a-tof-thal'mā), n. pl. [NL. (Latreille), < Gr. κέρας (κερατ-), ĥorn, + οφθαλμός, oye.] In Latreille's system of classification, a section of his phyllopodous branchiopods, equivalent to the modern families Branchipodidæ and Estheriidæ, of the order Phyllopodou. Properly Ceratophthalmata.

Ceratophyllaceæ (ser "ā-tō-fi-lā' sē-ē), n. pl.

Ceratophyllaceæ (ser "a-tō-fi-lā' sē-ē), n. pl. [NL., < Ceratophyllum + -aceæ.] A natural or-

[NL., Cerator der of plants, eontaining a single genus with only one species, Cera-tophyllum detophyllum de-mersum (horn-wort). It is a slender aquatie herh, with whorl-ed, finely dissect-ed, rigid leaves, and small, solitary, monrecious flowand small, softary, monœcious flow-ers, without calyx or corolla. It is common in pools, or slow streams over a great part of the world.

Hornwort (Ceratophyllum demersum),

Ceratophyllum (ser "a-tō-fil'um), n. [NL., ζ Gr. κέρας (κερατ-), a horn, + φέλλον = L. folium,

a leaf.] The only genus of plants of the natural

order Ceratophyllaeeæ.
Ceratophyta (ser a-tō-fi'tä), n. pl. [NL. (orig. Keratophyta — Cuvier, 1817), ζ Gr. κέρας (κερατ-), horn, + φυτόν, a plant.] In Cnvier's system of classification, a tribe of corticato Corallifera,

ceratophyte. Also keratophyte. ceratoplastic (ser'a-tō-plastik), n. [ $\langle$  ceratoplasty + -ic.] Pertaining to or of the nature of eeratoplasty. Also keratoplastic. ceratoplasty. A genus of auks, of the family Alcidæ: so called from the large decidence by the large deciduous horn which surmounts the base of the bill. The type and only species is the rhi-noceros auk, C. monocerata, of the northern Pacific ocean. Also Ceratorhyncha, Cerorhynca, Cerorhina, Cerorhyncha,

2. [Spelled Ceratorrhina.] A genus of coleopterous insects. Westwood, 1843.
Ceratorhyncha (ser'a-tō-ring'kä), n. [NL., < Gr. κρας (κρατ-), horn, + ρίτχχος, snout.] Same as Ceratorhina, 1. Bonaparte, 1828.
Ceratornis (ser-a-tōr'nis), n. Samo as Ceriornis.
Ceratosus: see ceratose.] 1. The horny or fibrous sponges; the Ceratosal. Also Keratosa. Bowerbank.—2. As restricted by Lendenfeld, a snborder of sponges, of the order Cornacuspongia, supported by a skeleton of spongin (exceptionally without any skeleton at all), the fiber without spicules proper, but with or (exceptionally without any skeleton at all), the fiber without spicules proper, but with or without foreign bodies. In this sense it is composed of the families Spongidæ, Aplysinidæ, Hircinidæ, Spongeltidæ, Aplysillidæ, and Halisareidæ. Also Keratosa.

ceratose (ser'a-tōs), a. and n. [⟨NL. ceratosus, ⟨Gr. κέρας (κερατ-), horn, +-osus: see -ose.]

I. a. Horny.

When the living matter is removed from a *Ceratose* sponge a network of elastic horny fibres, the skeleton of the animal, remains behind.

\*\*Encyc. Brit., XXII. 428.

II. n. Same as ceratode. Also keratose.

ceratosilicious (ser"a-tō-si-lish'ius), a. [〈 Gr. κέρας (κερατ-), a horn, + L. siliceus, silicious.] Containing or composed of mixed horny fibers and silicious spicules, as a sponge. Also kere-

ceratosilicoid (ser"a-tō-sil'i-koid), a. [As ceratosilic-ious + -oid.] Same as ceratosilicious. Also keratosilicoid.

Also keratositeoid.

Ceratosilicoidea (ser"a-tō-sil-i-koi'dē-ä), n. pl. [NL., < Cerato(idea) + Silicoidea.] An order or other group of sponges, intermediate between the Ceratoidea on the one hand and the Silicoidea. dea on the other; the siliciceratous sponges. They have skeletons of mixed ceratose fibers and silicious spicules. Most sponges are of this character. Also Keratosilicoidea.

**Ceratospongiæ** (ser"a-tō-spon'ji-ō), n. pl. [NL.. ζ Gr. κέρας (κερατ-), a horn, + σπόγγος, a sponge.]
In Claus's system of elassification, the second order of the class Spongiæ; the horny sponges, for the most part branched or with massive sponge-stocks, with a framework of horny fibers in which grains of silex and sand are embedded. Also Keratospongiæ.

ceratospongian (ser a-to-spon' ji-an), a. and n.
I. a. Of or pertaining to the Ceratospongia.
II. n. A member of the Ceratospongiae.

ceratostoma (ser-a-tos'tō-mā), n.; pl. ceratostomata (ser"a-tō-stō'ma-tā). [NL., ζ Gr. κέρας (κερατ-), a horn, + στόμα, a month.] 1. In bot.,

a peritheeium with an elongated neek, occurring in certain fungi. - 2. [cap.] A genus of pyrenomyeetous fungi.

ceratotheca (ser'a-tō-thē'kä), n. [NL., ⟨ Gr. κέρας (κερατ-), horn, + θήκη, case: see theea.] In entom., an antenna-case, or that part of the in-

ceratum (sē̄-rā'tum), n. [L.: see eeratel, n.] The pharmacopœial name for simple cerate, consisting of 30 parts of white wax and 70 of lard; ceratum adipis.

ceraunic (se-rā'nik), a. [⟨Gr. κεραννός, a thunderbolt, thunder and lightning, +-ie.] Pertaining to or accompanied by thunder and lightning.

ceraunics (se-rā'nik), n. [Pl. of eeraunics se-ies.] That braneh of natural philosophy which investigates the laws and describes the phenomena of heat and electricity. [Rare.]

ceraunite (se-rā'nīt), n. [= F. eeraunite, ⟨Gr.

ceraunite (se-râ'nīt), n. [= F. céraunite, ⟨ Gr. κεραννίτης (se. λίθος, stone), a kind of precious stone, lit. a thunder-stone, ⟨ κεραννός, a thunderbolt.] Same as belemnite.

Cercomonadidæ (ser "kō-mō-nad'i-dē), n. pl. [NL., < Cercomonas (-nad-) + -idæ.] A family of monomastigate flagellate Infusoria, named of monomastigate hagellate Injusoria, named by Saville Kent from the genus Cercomonas. These animalcules are naked, either free-swimming or adherent, with no distinct oral aperture, one terminal vibratile flagellum, and a permanent or temporary caudal filament. There are several genera, species of which inhabit both fresh and salt infusions. The many species of Bodo are parasites in the intestines of various animals, B. hominis being found in the dejections of persons suffering from cholera and typhoid fever.

Cercomonas (ser-kom'ō-nas), n. [NL. (Dujardin, 1841),  $\langle$  Gr.  $\kappa\epsilon\rho\kappa\rho\varsigma$ , tail,  $+\mu\rho\nu\dot{\alpha}\varsigma$ , unit: see monad.] A genus of flagellate infusorians, of

Cerdalidae (sér-dal'i-dē), n. pl. [NL., \( \chicksic Cerdale + -idæ. \)] In some systems of classification, a family of acanthopterygian fishes, represented by the genus Cerdale, embracing cell-like lycodoid forms with small slit-like gill-aper-tures and anisocereal tail. Cerdale and Microdesmus are western American genera.

Cerdonian (ser-dō'ni-an), n. A member of a Gnostic sect of the second century, deriving its name from Cerdo, a Syrian teacher, who held that there were two first causes, one good and one evil, and that one was net subject and one evil, and that one was not subject or inferior to the other. The evil principle is re-vealed by the law and the prophets, and known to men as the Creator of the world, the good principle being the unknown Father of Jesus Christ. The system of Cerdo was very similar to that of Mareion, his pupil. See Mar-

hind-brain of a vertebrate animal; a lobe of
the brain developed on the dorsal side of the
cerebrosopinal axis, between the corpora quadcerebrospinal axis, between the corpora quadrigemina in front and the medulla oblongata behind, and forming part of the roof of the fourth ventricle. The pons Varolli is the corresponding ventral portion of the cerebrospinal axis, and these two parts together are sometimes called the epencephalou. In man the cerebellum is a well-developed mass, having an average weight of about 5½ ounces, occupying the inferior occipital fossa, and separated from the posterior portions of the cerebral hemispheres above by the tentorium. A median portion or vermis and two lateral hemispheres are distinguished, and these are divided by transverse elefts into thin, closely packe lamine. The cerebellum has three pairs of peduneles by which it is connected with the rest of the brain: the superior peduncles, which join it with the cerebrum; the middle peduneles, which pons down on elther side to form the pons Varolli; and the inferior peduncles or restiform bodies, which connect it with the medulla oblongata. The surface of the laminæ is of gray matter, while the interior is white, so that a section at right angles to the lamelle presents a foliaceous appearance, which has received the name of arbor-vitæ. There are other masses of gray matter within, namely, the corpus dentatum, nucleus emboliformis, nucleus globosus, and nucleus fastigii. (See corpus and nucleus.) The cerebellum seems to be principally concerned with the coordination of voluntary movements. See cuts under brain and corpus.

[Rare.]—Digastric lobe of the cerebellum, a lobe of the cerebellar hemisphere on either side, on the lower surface, lying outside of the tonsil. Also called lobus biventer or biventral lobe, and lobus cunciformis.—Ganglion of the cerebellum. Same as corpus dentatum, (a) (which see, under corpus).—Great horizontal fissure of the cerebellum, a continuous fissure which separates the cerebellum into upper and lower portions. It begins in front at the middle peduncles, and extends around the outer and posterior border of each hemisphere.—Incisura cerebelli anterior, the anterior median notch of the cerebellum, into which the corpora quadrigemina are received.—Incisura cerebelli posterior, the median notch on the posterior outline of the cerebellum, formed by the projection of the cerebellar hemispheres beyond the vermis.—Ventricle of the cerebellum, into which the cerebellar hemical cerebellum behind.

cerebrum (ser'ē-brum), n.; pl. cerebra (-brā).

[L. (NL.), the brain, prob. akin to Gr. κάρα, the head (see cheer'), to κρανίου, cranium, and to AS. harnes: see harns. Cf. cerebellum.] 1. The entire brain; the encephalon.—2. That portion of the brain which lies in front of the cerebellum and pons Varolii. This is the ordinary meaning of the term in human anatomy, the cerebrum in this use comprising the prosencephalon or cerebral hemispheres and the olfactory lobes, the thalamencephalon or optic thalami and other parts about the third ventricle, and the mesencephalon, consisting of the corpora quadrigemina above and the crura cerebri below. See cuts under brain, corpus, and cerebral.

The cerebrum is generally recognized as the chief organ of mind; and mind, in its ordinary acceptation, means more especially a comparatively intricate co-ordination in time—the consciousness of a creature "looking before and after," and using past experiences to regulate future conduct.

11. Spencer, Prin, of Psychol., § 22, note.

22. The two cerebral hemispheres taken together, with the olfactory lobes; the prosen-

gether, with the olfactory lobes; the prosencephalon. See cerebral hemisphere, under cerebral.—4. In insects, the supra-esophageal ganbrâl.—4. 4. Observant of conventional forms; fond of using ceremony; punctilious as to outward observances and ceremonies.

You are too senseless-obstinate, my lord,
Too eeremonious and traditional.

Shak., Rich. III., iii. 1.

Syn. Ceremonious, Ceremonial, Formal. Ceremonious,
full of ceremony, fond of ceremony; ceremonial, consisting
in or having the nature of ceremony, or bearing upon eeremonies: as, ceremonious manners, persons; ceremonial
law, rites, uncleanness. Formal differs from ceremonious
in that a formal person tries too hard to conform to rule
in his whole bearing as well as in his bearing toward
others, while a ceremonious person magnifies too much
the conventional rules of social intercourse; thus both
are opposed to natural, formal to easy, and ceremonious
to hearty or friently.

The French are open, familiar, and talkative; the Italians

are opposed to natural, formal to easy, and ceremonious to hearty or friendly.

The French are open, familiar, and talkative; the Italians stift, ceremonious, and reserved.

The Roman ceremonial worship was very claborate and minute, applying to every part of daily life.

Master of ceremonies. (a) A person who regulates the forms to be observed by the company or attendants on a public occasion; specifically, an officer of the royal household of England who superintends the reception of ambassadors. (b) An officer in many European eathedrals whose business it is to see that all the ceremonies, vestments, etc., peculiar to each season and festival are observed in the choir.—Military ceremonies, stated military exercises, such as guard-mounting, inspections, parades, reviews, funeral escorts and honors, color escorts, etc. =Syn. 1. Form, Ceremony, Rite, Observance. Form is the most general of these words; it is impossible to join in worship without the use of some forms, however simple; we speak of legal forms, etc. Ceremony is a broader word than rite, in that a rite is always solemn and either an act of religion or suggestive of it, as marriage-rites, the rites of initiation, while ceremony goes so far as to cover forms of politeness. A rite is generally a prescribed or eustomary form, while a ceremony may be improvised for an occasion: as, the ceremony of laying a corner-stone or opening a new bridge. Observance is primarily a compliance with a requirement, as in religion, where the word was applied to the act of compliance: as, the observance of the sabbath.

Heavy persecution shall arise
On all who in the worship persevere
Of spirit and truth; the rest, far greater part,
Will deen in outward rites and specious forms

Ceres (sẽ'rēz), n. [L., the goddess of agricul-ture, esp. of the cultivation of grain; prob. from the root of creare, create: see create. Cf. ceremony.] 1. In class. myth., the name given by the Romans to the Greek goddess Demeter, by the Romans to the Greek goddess Demeter, whose worship they adopted with some subordinate differences. She was the mother of Proserpine and, according to some phases of the myth, of Bacchus. She was the goddess of the earth in its capacity of bringing torth fruits, especially watching over the growth of grain (whence the adjective cereat). The Romans celebrated in her honor the festival of the Cerealia. Ceres was always represented fully draped. Her attributes were ears of eorn and poppies, and on her head she sometimes wore as corn-measure.

They are ovel or columnar plants with siny ribs or angles. of which are found in the United States. They are oval or columnar plants, with spiny ribs or angles, large tubular funnelform flowers, and small black exalbuminous seeds. They vary greatly in form and habit, the columnar species being either erect or climbing, and the flowers are often very large, as in the night-blooming ecrens group, C. grandiflorus, C. Macdonaldice, etc., which is well known in cultivation. The old-man cactus, C. senilis, is so called from the long gray hairs covering the top of the stem. The most remarkable species are those with tall columnar stems, from 25 to 50 feet high, found chiefly in northwestern Mexico and Arizona, some of

them bearing large edible fruit. The best-known of this group is the giant eactus, C. giganteus, of Arizona. See cuts under Cactacece.

In pros., a division made in a line by the termination of a word, especially when this coincides with a pause in delivery or recitation. Strictly, cesura is the division made by the termination of a word within a foot, the division occasioned by the concurrence of the end of a word with the end of a footbeing called dieresis. This distinction of terms is not, however, generally observed in treating of modern poctry. A masculine cesura is one which lmmediately follows a syllable bearing the ictus or metrical accent; a feminine cesura is one which succeeds a metrically unaccented syllable. A cesura is called trithemineral, penthemimeral, or hephthemimeral, according as it occurs in the middle of the second, third, or fourth foot. In the dactylic hexameter the eesura after the first of the two short syllables of the dactyl is called the trochaic cesura or cesura after the trochee (of the second, third, or fourth foot, as the case may be). In the same kind of verse a division at the end of the fourth foot is called a bucclic cesura, more accurately a bucclic dieresis. In the following examples the cesura is marked by a dagger (t), the dieresis by a parallel (1). Thus, in the lines of English heroic verse (iambic pentapody) given below there is a dieresis after the third foot of the first line, and a cesura in the fourth and third feet of the second and third lines respectively.

Befőre | the hills | appeard, | for foun | tain flow'd, Thou with | Étér | nall Wis | dom t didst | cônvêrse.

the second and third lines is perfectly a few days and the fills | åppear'd, | for foun | tain flow'd, Thou with | Étêr | nal Wis | dom't didst | converse, Wisdom | thý sis | têr, † and | with hêr | didst | play.

\*\*Milton\*\*, P. L., vil. 8.

muton, P. L., vii. 8. A ceaura occurs in the fourth foot of this iamble hexapody (trimeter):

To dēath's | bĕnūm | mtng ô | piúm t âs | mỹ ôn | lý cứre. *Milton*, S. A., I. 630.

The remaining examples show different cesuras in the dactylic hexameter. One of the most usual is the penthemimeral: as,

Năught bật trả | ditiôn rể | mãins tối thể | beaûtifal | village of | Gránd-Prē. Longfellow, Evangeline, Int. The trochaic cesura of the third foot is also very frequent:

An example of the bucolic cesura (dieresis) combined (as is frequent) with the penthemineral is:

Wē ður | country | fft, † thou, | Tītyras, | stretched in the | shadow. Longfellow, tr. of Virgil's Eclogue, i. The hephthemimeral is generally preceded by a tritheas secondary cesura : as

Bëardëd with | möss, t ånd in | gårmënts | grëen, t indis-| tinct in thë | twilight. Longfellow, Evangeline, Int.

cesural, cæsural (sē-zū'ral), a. [< eesura, eæsura, + -al.] Pertaining to or eonstituting a cesura.

It is but a casural pause, and anon the curtain lifts.

D. G. Mitchell, Wet Days.

Chætodontidæ (kē-tō-don'ti-dē), n. pl. [NL., \[
 \left( \text{Chartodom(t-)} + \text{-ide.} \right] \]
 A family of acanthopterygian or spiny-finned fishes, typified by the genus Chætodon, of varying limits with different writers. By former writers it was used for a group corresponding to that called by many iclithyologists Squa-

Chatodon lunula

mipinnes. By late ichthyologists it is restricted to Chartodontoidea, with a single entire dorsal fin, branchiat apertures confluent below, and the post-temporal bones undivided and articulating by a single process with the eranium. It includes numerous tropical sea-fishes of rather small or moderate size, most of which frequent coral reefs. They are generally remarkable for the contrast and beauty of their colons.

Chætodontina (kë\*tō-don-ti'nä), n. pl. [NL., < Chætodon(t-) + -ina².] In Günther's system of classification, the first group of Squamipinnes, characterized by the absence of palatine and yomerine teeth: nearly the same as the family

vomerine teeth: nearly the same as the family *Chætodontidæ* of recent authors.

chætodontoid (kē-tō-don'toid), a. and n. I. a. Resembling or having the characters of the Chartodontoidea.

II. n. A member of the Chatodontoidea. II. n. A member of the Chartodontoidea.

Chatodontoidea (kō"tō-don-toi'dō-ā), n. pl.

[NL., < Chartodon(t-) + -oidea.] À superfamily of chaetodont fishes. It contains several families, having peculiarly modified vertebre and basioccipital bone, vertically extended lamellar upper pharyngeal bones, and a much compressed body with its integument encroaching upon the dorsal and anal fins.

chaetognath (kō'tog-nath), a. and n. I. a. Of or pertaining to the Chartognatha; chaetognathous.

II. n. A member of the thatognatha.

II. n. A member of the thatoguatha. Chætognatha (kē-tog'nā-thā), n. pl. [NL., neut. pl. of chatognathus: see chatognathous.] A group of transparent animals consisting of family Sagittide, the affinities of which are still undetermined. They resemble the nematoid worms and oligochetous annelids in structure, while their mode of development is peculiar, presenting some points of resemblance to that of brachiopods and echinoderms. The group is now made a separate class of the branch

Chatognathous (kē-tog'nā-thus), a. [< NL. chatognathus, < Gr. χαίτη, mane (NL. chata, bristle), + γνάθος, jaw.] Pertaining to or having the characters of the Chatognatha.

Chetomium (kē-tō'mi-um), n. [Nl., ζ Gr. χαίτη, mane (Nl., chuta, bristle).] A genus of ascomycetous fungi which grow upon paper (sometimes in books), straw, and similar stances, frequently producing red or yellow spots. The fructification consists of superficially borne perithecia, clothed with hairs or minute bristles and con-taining asci and spores. The asci are very delicate, and are easily ruptured, so that only the spores are com-

Chætonotus (kē-tō-nō'tus), n. [NL., Gr. χαίτη, mane (NL. chæta, bristle), + νῶτος, the back.] A genus of minute aquatic worm-like animals of uncertain position, referred by Ehrenberg to the rotifers, by Dujardin to the infusorians; and they are placed by some writers with Ichthyidium in the order of oligochatous annelids, and by others with Ichthyidium and some related genera in a separate class Gas-

Chætophora¹ (kē-tof'ō-rā), n. pt. [NL., neut. pl. of chatophorus: see chatophorous.] In zoöl., a division of annelids including those which

move by means of setigerous feet or parapodia, or by suctorial disks, as the oligocheetous and polycheetous forms of worms,

cnatophora elegans. In one branch a zoöspore is be-ing produced in each cell. (From Le Maout and De-caisne's "Traité général de Botanique.")

and the suctorial forms, or leeches. The group is nearly equivalent to the class *Annelida* in the usual acceptation of that term.

Chætophora<sup>2</sup>(kē-tof'ē-rā),

n. [NL., fem. sing. of chætophorus: see chætophorous.] In bot., the principal genus of the Chætopho-

racee.
Chætophoraceæ (kē-tof-ō-rā/sē-ē), n. pl. [NL.,< Chæ-tophora²+-aceæ.] A family of filamentous green fresh-water or rarely terrestrial algæ, belonging to the Chlorosporeæ, and characterized by bristle-like tips on terminal arlike tips on terminal appendages. Chatophora is the principal genus, and C.

elegans a common species.

chætophorous (kē-tof'ō-rus), α. [⟨ NL. chætophorus (cf. chætiferous), ⟨ Gr. χαίτη, mane (NL. chæta, bristle), + -φόρος, ⟨ φέρειν = E. bear¹.]

Bearing bristles; setigerous or setiferous; chætiferous; chætiferous; tiferous; specifically, of or pertaining to the Chatophora.

chætopod (kē'tō-pod), a. and n. I. a. Of or pertaining to the Chwtopoda. Also chwtopodous. II. n. An annelid or worm of the order Chw-

Chatopoda (kē-top'ō-dā), n. pl. [NL., ⟨ Gr. χαίτη, mane (NL. chata, bristle), + ποίς (ποδ-) = E. foot.] 1. In some systems of zoölogical classification, a prime division or branch of a phylum of the animal kingdom called Appendiculata, consisting of two classes, Oligochata and Polychata; in this sense contrasted with dieulata, consisting of two classes, Oligocheta and Polycheta: in this sense contrasted with Rotifera (alene) and Gnathopoda (Arthropoda indiscriminately). E. R. Lankester. [Little used.]—2. Ordinarily, an order or subclass of the class Annelida, with dorsal branchiæ and non-suctorial mouth. They are marine worm-like annelids not distinctly segmented, and with tubular setigerous feet or parapodia, whence the name. There is a metamorphosis in most forms, and the sexes are generally distinct. This order is a large and important group of about 20 families, which has received many names, and to which varying limits have been assigned; it is now usually divided into Oligocheta and Polycheta.

chætopodous (kē-top'ē-dus), a. [< Chætopoda + -ous.] Same as ehætopod.

Chætops (kē'tops), n. [Nl. (Swainson, 1837), < Gr. χαιτη, mane (NL. ehæta, bristle), + ὁψ, eye, face.] A notable genus of turdoid passerine birds of Africa: so called from the bristly rictus

which they possess. C. frenatus is an example. Chætopteridæ (kē-top-ter'i-dē), n. pl. [NL., < Chætopterus, 1, + -idæ.] A family of annelids, usually referred to the order Chetopoda, sometimes to the Cephalobranchia. The body is clongated and segmented into several dissimilar regions; the dorsal appendages of the middle segments are alate and often lobate, and they usually have 2 or 4 very long tentacular ciri. The animals live in parchment-like tubes. Chætopterus (kē-top'to-rus) n. [NL.] Chætopterus (kē-top'to-rus) n. [NL.]

Chatopterus (kē-top'te-rus), n. [NL, ζ Gr. χαιτη, mane (NL. chata, bristle), + πτερόν, wing.] 1. The typical genus of the family Chatopterida. C. pergamentaceus is a West Indian species.—2. A genus of sparoid fishes.

Chætosoma (kē-tō-sō'mā), n. [NL.,  $\langle$  Gr.  $\chi ai\tau \eta$ , mane (NL. chæta, bristle), +  $\sigma \tilde{\omega} \mu a$ , body.] 1. The typical genus of the family Chætosomidæ, having a double row of short knebbed rods on the ventral surface in front of the anus.—2. A

the ventral surface in front of the anus.—2. A genus of coleopterous insects.

Chætosomidæ (kē-tē-sō'mi-dē), n. pl. [NL., < Chætosoma, 1, + -idæ.] A family of marine worms of uncertain position, usually referred to the order Nematoidea, and considered to have relationship with the Chætognatha (Sagitta).

Chætospira (kē-tē-spī'rā), n. [NL. (Lachmann, 1856), < Gr. χαίτη, mane (NL. chæta, bristle), + σπεῖρα, a coil, spire.] A genus of heterotrichous infusorians, of the group of the stentors or trumpet-animaleules, having a slenstentors or trumpet-animaleules, having a slender, spirally twisted, ribbon-like extension of the anterior region, and a lateral hyaline expansion along the peristome. It includes sedentary loricate infusorians, the zoöids of which are not attached to the sheath, as C. muelleri.

Chætura (kṣ-tū'rṣ), n. [NL. (Stephens, 1825), < Gr. χαίτη, mane (NL. chætu, bristle), + οὐρά, tail.] 1. In ornith., a genus of swifts, of the

Chalcididæ1 (kal-sid'i-dē), n. pl. [NL., < Chal-(Chalcid-) + -idw.] In entom., a large family of pupivorous spiculiferous hymenopterous insects, typified by the genus Chalcis, composed mainly of minute species most of which are mainly of minute species most of which are parasitic on the larvae or eggs of other insects. Some of them attack other parasites of the same or related families. The fennale chalcid, like the ichneumon-fly, deposits her eggs on the larva or egg which she infests, sometimes on the surface, sometimes heneath it, and often many together. The larvae which emerge feed on the egg or on the soft parts of the infested larva; the latter is unable to complete its transformations, and eventually dies, when the chalcid emerges either as a perfect insect or as a larva, in the latter case sometimes spinning a rough cocoon in which to pass the pupa state. The Chalcididae in their perfect state have usually hard and often brilliantly metallic bodies, from which the typical genus, Chalcis, takes its name; the antennæ are elbowed; the ovipositor issues hefore the tip of the abdomen; the pronotum does not reach the tegulæ; and the wings are almost devoid of veins. Many species are yet undescribed. Also Chalcidæ. Chalcididæ² (kal-sid'i-dē), n. pl. It is seen, when examined through the microscope, to be made up in large part of minute fragments of the shells of Fornatinifera, mollusks, and echinoderms, and also of spicutes of sponges. It does not exactly resemble any deep-sea deposit at present known to be in process of formation. This rock is a very important and conspicuous formation on the south coast of England (which on account of the whiteness of its cliffs is poetically styled Albion) and in the north of France. Under the city of London it has a thickness of from 600 to 800 feet. The chalk gives its name to the so-called Cretaceous formation. It is not known that there is any rock exactly resembling chalk in any other region than that of the Paris and London basins. Chalk, being a nearly pure carbonate of lime in a pulverized condition, is an article of great commercial importance, and is used in a large number of operations. For such purposes it is crushed and levigated. One of its principal uses is for whitening walls, or whitewashing. It is not need with oil, as it has no body with that vehicle; but, on account of its being very much cheaper than lead paint, it supersedes that article to a great extent. There are many names for the various preparations of chalk, as whiting, Spanish white, Paris white, etc. Chalk is not a desirable material for ordinary mortar, but it is used to some extent as one of the ingredients of hydraulic cement. See cement, 2.

Rather assume thy right in silence and de facto than voice it with claims and challenges. Eacon, Great Place.

9. In law, an objection to a juror; the claim of a party that a certain juror shall not sit in of a party that a certain juror shall not sit in the cause. The right of challenge is given in both civil and criminal trials, for certain reasons which are supposed to disquality a juror to be an impartial judge. The challenge may extend either to the whole panel or body of jurors, called a challenge to the array, or only to particular jurors, called a challenge to the polls. Both of these challenges are subdivided into principal challenges (or challenges for principal cause) and challenges to the favor. A principal challenge is a challenge which alleges a fact of such a nature that, if proved, the juror is disqualified as a matter of law, without inquiring whether he is actually impartial: as, that one or more of the jury are returned at the nomination of the other party, or are nearly related to the other party. A challenge to the favor consists in the allegation by the party of a cause that might probably bias, and the raising of the question whether the juror is in fact impartial: as, a statement that a juror has already formed an opinion, or is prejudiced against the party. A peremptory challenge, allowed by statute in many jurisdictions, is a challenge of jurors, to a limited number, to be taken without showing any cause at all.

I do believe . . .
You are mine enemy : and make my challenge,
You shall not be my judge. Shak., 11en. V111., ii. 4.

(b) An officer charged with the direction and management of the private apartments of a monarch or nobleman. The land grade chamberlain of Great Britain is the sixth officer of the crown. His functions, always important, have varied in different reigns. The duties which now devolve upon him are the robing and attending on the king at his coronation: the care of the ancient palace of Westminster; the provision of furniture for the houses of Parliament, and for Westminster Hall when used on great occasions; and attending upon peers at their creation, and upon bishops when they perform their homage. The office is now jointly held by the families of Cholmondeley and Willoughby de Eresby, and the honors are enjoyed in each alternate reign by each family successively. The office of lord chamberlain, is quite distinct from that of the lord great chamberlain, and is changed with the administration. This officer has the control of all parts of the household (except the ladies of the queen's bedchamber) which are not under the direction of the lord steward, the groom of the stole, or the master of the horse. The king's (queen's) chaplains, physicians, surgeons, etc., as well as the royal tradesmen, are in his appointment; the companies of actors at the royal theaters are under his regulation; and he is also the licenser of plays. He has under him a vice-chamberlain.

touch, and contains small grains or eminences which are of a bluish-gray color in the shade, but in the light of the sun all parts of the body become of a grayish-brown or tawny color. The extraordinary faculty which the chameleon possesses of changing its color, in accordance with that of the objects by which it is surrounded or with its temper when disturbed, is due to the presence of clear or pigment-bearing contractile cells placed at various depths in the skin, their contractions and dilatations being under the control of the nervous system. Its power of fasting and labit of inflating itself gave rise to the fable that it lives on air. It is in reality insectivorous, its tongue, which is long and covered with a viscid saliva, being darted at its prey and securing it when touched.

1. The effervescent or so-called sparkling wine made within the limits of the old province of Champagne in northeastern France, chiefly in the region about Reims, Epernay, Avize, Ay, and Pierry, in the department of Marne. The vineyards are all situated within a district about twenty miles long, from Reims on the north to Vertus on the south, and are generally classed as "of the Ilill" (montagne) and "of the River," namely, along the Marne; but great quantities of new wine are brought from other regions, and each manufacturer makes a mixture or blend according to his own system, to produce the brand of wine known by his name. The effervescence is artificially produced, and is of the nature of an arrested or incomplete fermentation. The greater or less sweetness of the wine is produced by the addition of a liqueur consisting of sugarcandy dissolved in old wine; the different degrees of sweetness are indicated by the terms see, "dry," doux, "sweet," and brut, which last term, denoting originally the new or unmanipulated wine, is now used for the manufactured wines having from 1 to 3 per cent, of liqueur. The sweeter wines are generally the more effervescent.

2. Effervescent wine, wherever made: as, Swiss champagne; California champagne.—Champagne brandtes, the French brandies most in repute of the eognac class. These are, in general, classified as grandes champagnes and fines champagnes. The grandes champagnes are distilled from the wine produced in a level district called Champagne, In the department of Charente, west of Angoulème and south of Cognac. The fines champagnes are the product of a blending of the brandies produced in this and neighboring regions of sonthwestern France with alcohols derived from grain or from beetings of the two kinds of alcohol giving rise to distinct flavors in the brandy. An inferior grade, known as petite champagne, is made from grapes grown in the southern 2. Effervescent wine, wherever made: as, Swiss

Champlain (sham-plān'), a. [< Lake Champlain, bordering on New York, Vermont, and Canada.] In Amer. geol., a term first employed Canada.] In Amer. geol., a term first employed by Emmons to designate a part of the Paleozoic series of the State of New York. Later suggested by Dana as the name of a division of the superficial (Posttertiary) deposits of northeastern North America, conceted in origin, according to the prevalent glacial theories (see glacial), with the melting of the great ice-sheet supposed by many geologists to have once extended over that region.

The loose deposits or drifts overlying the lower unstratified boulder-clay belong to the period of the melting of the great ice-sheets, when large bodies of water, discharged across the land, levelled down the detritus that had formed below or in the under part of the ice. This remodelled drift has been called the Champlain group.

(LL.) an officer in charge of records, who stood at the latticed railing inclosing the judgment-seat, and acted as an intermediary between the suitors and the judge; < L. cancelli, a latticed railing: see chancel and cancel, and cf. chancery.] 1. Originally, under the later Roman emperors, a doorkeeper or usher, who stood at the latticed railing inclosing the judgment-seat, to keep off the crowd and to introduce such persons as were entitled to pass troduce such persons as were entitled to pass inside. Later and naturally he became a sort of intermediary between petitioners and the judges, and arranged about their business. In the Eastern Empire, the Roman-German empire, and the kingdoms established on the ruins of the Roman empire, this intermediary door-keeper became a notary or seribe on whom devolved the duty of preparing and sealing all important documents, such as charters, letters, and other official writings of the crown; hence he became keeper of the great seal, and in consequence of the influence of his position his office came to be one of the most important. From the Roman empire the ecclesiastical court at Rome introduced the office, and the chancery at the Vatlean was repeated throughout the the chancery at the Vatican was repeated throughout the several bishoprics, where each diocese, and frequently each of the great menastic houses, had its chanceller. Hence-2. A secretary; a notary.

3. In Great Britain: (a) The highest judicial officer of the crown, law adviser of the ministry, and keeper of the great seal: more fully designated lard high chancellar. He is a cabinet minister and privy councilor by virtue of his office, and prolocutor of the House of Lords by prescription, and ranks next after the princes of the blood and the Archbishep of Canterbury. The writs for the convocation of Parliament are issued by him. To him belongs the appointment of all justices of the peace, and he is the patron of all livings of the crown under the value of twenty marks in the king's books; he is keeper of the sovereign's conscience, visitor of all hospitals and colleges founded by the king, guardian of all charitable uses, and judge of the High Court of Chancery, now called the Chancery Division of the Supreme Court. There is also a lord high chancellor in Ireland at the head of the equity system of that country, and Scotland had a chancellor until the treaty of union with England in Iror. (b) An officer, officially styled chancellor of the ducky of Laucester, who presides in perand keeper of the great seal: more fully desig of the duchy of Laucaster, who presides in person or by deputy over the courts of law and equity in the duchy of Lancaster. He is usually a cabinet minister, and soldom a lawyer. (c) The finance minister of the British government, more fully styled chancellor of the exment, more fully styled chancellor of the exchequer. He is invariably a member of the House of Commons (that division of the legislature having the sole right of laying taxes and originating money bills) and also of the cabinet. The chancellor of the exchequer was formerly a judge exoficio in the equity department of the Court of Exchequer, taking precedence of all the barons; but when the equitable jurisdiction of this court was transferred by 5 Vict. v. to the Court of Chancery his judicial functions became obsolete. (d) In the jury system of Scotland, the preses or foreman of a jury, who amnounces the variety when it is a verbal who announces the verdict when it is a verbal one, and who, when it is in writing, hands it in and indorses it, in the name of the jury, along with the clerk of the court.—4. (c) A secretary, especially of an embassy or a consulate.—5. In the new German empire, the president of the Federal Council, who is also charged with the supreme direction, under the emperor, of all imperial affairs.—6. The chief officer, next to the honorary head, of a military or honorable order, who guards its seal, administers its property, and preserves its records: as, the chancellor of the Order of the Garter.—7. Eccles.: (a) An officer learned in canon law, who acts as vicar-general to a bishop, holds his courts, and directs and advises him in all matters of ecclesiastical law, and is the keeper of his seals. More fully styled chancellor of a bishop or of a diocese. (b) An officer belonging to a cathedral, who arranges the celebration of religious services, hears lessons, lectures in theology, writes letters of the chapter, applies the seal, keeps the books, etc.—8. The titular head of a university, from whom all degrees are supposed to emanate. The chancellor was originally the notary of the chapter of the cathedral. But nobody could preach without the authorization of the bishop; and the pope as the chief of the bishops undertook to regulate this nuthor-ization. He made the chancellors of certain cathedrals his deputies for this purpose, and thus they alone could grant the degree of master of theology, the highest of the university, which carried with it the right to preach. the university, which carried with it the right to preach. The chancellors seldom took an active part in the government of the university. In Great Britain the office is now a merely honorary one, and is usually held by a nobleman or some statesman of eminence. Milton, P. R., ii. 290.

Specifically—(a) A melody composed in the Ambrosian or Gregorian style, following one of the ecclesiastical modes, having often a note for each syllable, and without a strict rhythmical structure: sometimes called a tone; when used in contrapuntal composition, called a canto fermo. (b) A Gregorian nelody, usually of ancient origin, intended to be used with a prose text in several verses, several syllables in each verse being recited or intoned upon a single note. A Gregorian chant of this kind has five parts: the intonation, the first dominant or reciting-note, the mediation, the second dominant or reciting-note, and the ending or cadence. (c) A short composition in seven measures, the first and fourth of which contain but one note, whose time-value may be extended at will so as to accompany several syllables or words, while the remaining measures are simig in strict rhythm: commonly called an Anglican chant, because most extensively used in the services of the Anglican Church for the canticles and the psalms. An Anglican chant consists of two parts, the first of three and the second of four measures; each half begins with a reciting-note and ends with a cadence; the first cadence is also called the mediation. A double chant is equal in length to two typical or single chants, that is, contains fourteen measures, four reciting-notes, etc. The distribution of the words of a text for use with a chant is called pointing (which see). The Anglican chants, that is, contains fourteen measures, four reciting-notes, etc. The distribution of the words of a text for use with a chant is called pointing (which see). The Anglican chant is probably a modernized form of the Gregorian, without an intonation, having the mediation and cadence made strictly rhythmical, and following the modern ideas of tonality and harmony. Scott, Marmion, ii. 4.

Scott, Marmion, ii. 4.

It was and is the common practice of monks to assemble every morning to hear a chapter of the rule read, and for other purposes. Both the meeting itself and the place of meeting gradually obtained the name of Capitulum or chapter from this practice. The assembly of the monks of one monastery being thus designated "the chapter," it is easy to understand that assemblies of all the monks in any province, or of the whole order, came to be called "provincial" or "general" chapters, in the case of most of the orders, is held once in three years.

[NL., < Chara + -aceæ.] A small group of submerged chlorophylbearing cryptogamous plants, nearly related to the algæ and consisting of slender-jointed stems which bear whorls of leaves at regular intervals. which bear whorls of leaves at regular intervals. The leaves bear leaflets and the organs of fructification. The antheridia are spherical bodies composed externally of eight triangular shield-shaped segments, inclosing a great number of filaments. In each joint or cell of the latter is produced one antherozoid coiled spirally. The carpogonium consists of a central cell which, after fertilization, becomes the fruit and is inclosed by 5 cells twisted spirally around it. The species are usually grouped in two families, each containing two genera. In the Charee, represented by Chara, the stem and leaves are sometimes covered with a cortical layer of cells and are sometimes naked. The leaves are in whorls of from 6 to 12, and the leaflets are always one-celled. In Nitellea, represented by Nitella, the stems are never corticated, and the leaflets are in whorls of from 5 to 8, and often more than one-celled. The circulation of the protoplasm is easily observed in the cells of many Characea. Several species are incrusted with line and are very brittle.

< L.-tuda, cf. chapter.] 1. A written instrument,
expressed in formal terms and formally executed, given as evidence of a grant, contract,
etc.; any instrument, executed with form and
solemnity, bestowing rights and privileges. etc.; any instrument, executed with form and solemnity, bestowing rights and privileges. In modern use the name is ordinarily applied only to government grants of powers or privileges of a permanent or continuous nature, such as incorporation, territorial dominion, or jurisdiction. As between private persons it is also loosely applied to deeds and instruments under seal for the conveyance of lands; a title-deed. Royal charters are such as are granted by sovereigns in conveying certain rights and privileges to their subjects, such as the Great Charter granted by King John (see Magna Charta, under charta), and charters granted by various sovereigns to boroughs and municipal bodies, to universities and colleges, or to colonies and foreign possessions; somewhat similar to which are charters granted by the state or legislature to banks and other companies or associations, etc. In Scots law a charter is the evidence of a grant of heritable properly made under the feudai condition that the grantee shall annually pay a sum of money or perform certain services to the grantor, and it must be in the form of a written deed. The most common charters are feu charters. (See feu.) In American law a charter is a written grant from the sovereign power conferring rights or privileges upon a municipality or other corporation. The term is generally applied to the statute, letters patent, or articles of association sanctioned by statute, creating a corporation, as a city, college, stock-company, benevolent society, or social club.

It. casupola, a shanty), dim. of L. casa, a house: see casa. Cf. casula and cassock, of the same ult. origin.] Eccles., a sleeveless vestment, originally eircular in outline, but in medieval and modern use of an elliptical shape, or modified from this so as to be nearly rectangular, and provided with an aperture in the center through which to pass the head. It is worn so as to fall in front and at the back of the warer to an equal or nearly equal distance, showing only one of its halves at a time. The chasuble is the principal vestment worn by a priest when celebrations.

rincipal vestment worn by a priest when celebrating the mass or holy communion, and is put on over the alb. It is held to represent the seamless coat of Christ, or charity symbolized by it. The material is usually rich stuff—silk, brocade, or velvet. In its oldest form it was very vet. In itsoldest form it was very full and long, reaching nearly to the feet. The medieval or cl-liptical form, which is some-times worn in Roman Catho-lic churches

shape commonreach much below the hips, and is nearly rectangular at
the back, the part which falls in front being cut away at
the sides so as not to impede the movement of the arms,
and the two parts are frequently united merely by straps
at the shoulders. The chasuble generally has a pillar or
vertical stripe at the front, a V-cross or Latin cross on
the back, or on both front and back, and sometimes an
edging on both sides. These ornaments are added in a
different material with gold or other embroidery, and
are known as the orphreus of the chasuble. Among the
different names of the chasuble, panula, identifying it
with the ancient Roman garment of that name, is probmbly the oldest. The same word occurs also in various
Greek forms. It is translated "cloke" in 2 Tim. iv. 13,
and is the accepted name for the chasuble in the Greek
Church, The amphibalus, worn at one time in Gaul, seems
to have been similar to or identical with the chasuble. In
England the name restment was in use at the time of the
Reformation, both for the chasuble alone and for the chasuble
with its subsidiary vestments or adjuncts, the stole,
amice, and maniple. The use of the Chasuble in Anglican
churches continued long after the Reformation, and is
maintained by certain of them (on authority claimed from
the Ornaments rubric) at the present day. It is also worn
in the Greek Church. See ornament.

3. pl. A game played with twenty-four pieces or men on a board divided into sixty-four checks or squares. Each of the two players is provided with twelve pieces, which are placed on alternate squares on the first three rows on one of two opposite sides of the board. The men are moved forward diagonally to the right or left one square at a time, or over an opposing piece if there is an empty space beyond it on the same diagonal; in the latter ease the man thus "jumped" is "taken"—that is, removed from the board. Two or more pieces can be taken at once if similarly exposed, with one intervening empty square between each pair into which the adversary can "jump." The object of each player is to eapture all his opponent's men, or to hem them in so that they cannot move. When a player succeeds in moving a piece to the further end of the board (the crownlead or king-row), that piece is crowned or becomes a "king," and hus the power to move or capture diagonally backward or forward. In Polish checkers there are one hundred squares on the board, and forty counters; the men can move in taking either backward or forward, and kings can move the whole length of the board on the diagonals when no pieces intervene. Also called draughts.

etc. The Scand, word is different: Icel. astr=Sw. Dan. ast, cheese.] 1. The curd or easein of milk, coagulated by rennet or some acid, separated from the serum or whey, and pressed in a vat, hoop, or mold. All the acids separate the cheese from the whey; neutral salts, and likewise all earthy and metallic salts, produce the same effect; but rennet, which is made by macerating in water a piece of the last stomach of a calf, salted and dried for this purpose, is most efficient. The flowers of the Galium verum, or yellow lady's-bed-straw, and the julce of the fig-tree very readily coagulate milk. There are many kinds of cheese, which differ from one another according to the quality of the milk employed and the mode of preparation. Suft cheeses, such as creamcheese, Bath and Yorkshire cheese, will not keep long. Hard cheeses, as Cheshire, Gloucester, Cheddar, Parmesan, and Dutch, can be kept a long time. There is also an intermediate class, as Gruyère, Stilton, etc. Cheese is composed of from 30 to 50 per cent. of water, 20 to 35 per cent. of casein, 18 to 30 per cent. of fat, and 4 to 6 per cent. of mineral matter.

Chelidridæ (ke-lid'ri-dē), n. pl. An improper spelling of Chelydridæ.

chelifer (kel'i-fèr), n. [NL. chelifer, < chela¹, q. v., + L. ferre = E. bear¹.] 1. One of the Cheliferidea; a false scorpion.—2. [cap.] A genus of pseudoscorpions, typical of the family Cheliferidæ, including book-scorpions with two eyes, as C. cancroides, a small species often found in musty old books.

chelifer, 2, + -idæ.] A family of pseudoscorpions, or false scorpions, of the order Cheliferide or Pseudoscorpiones, typified by the genus

dea or Pseudoscorpiones, typined by the genus Chelifer. They are minute harmless forms resembling a scorpion in front, but with a body flat and rounded behind and destitute of a tail. They live in moist dark places, and feed chiefly on mites and wood-lice. Cheliferidea (kel″i-fe-rid'ē-ā), n. pl. [NL., ⟨ Chelifer, 2, + -idea.] An order of the class Arachnida, containing the false scorpions or pseudoscorpions, having the abdomen segmented, indistinctly separated from the cephalothorax, and without the appendage with its lothorax, and without the appendage with its poisonous sting which characterizes the true poisonous string while Characterizes the true scorpions. The maxillary palpi or pedipalps are longer than the thoracic limbs, and end in a chela or pincer-like prehensile claw. There are two families, the Obisitive with four eyes, and the Cheliferidæ with two eyes. The order includes the book-scorpions. Generally called Pseu-

Like the Spiders the Cheliferidea are provided with silk-glands, and unlike the Scorpions, which they externally resemble, they have neither a postabdomen nor poison-glands. They breathe by trachee. These Arachnids are of small size, and are found chiefly in caverns and damp places in temperate countries. Pascoe, Zool. Class., p. 95.

cheliferous (ke-lif'e-rns), a. [As chelifer + -ous.] Having chelæ: said of the chelate limbs of crustaceans, and of animals which have chelæ. crustaceans, and of animals which have chelee.

— Cheliferous abdomen, one furnished at the apex with strong and thick forceps, somewhat resembling the great claw of a scorpion.— Cheliferous slaters, the cursorial isopod crustaceans of the genus Tanais.

cheliform (kē'li-fôrm), a. [< NL. chela¹, q. v.. + L. forma, form.] Having the form of a chela, cheliped, or chelicera; like the great claw of a lebster or crab; pincer-like.

chelingue (che-lingg'), n. [E. Ind.] Same as masoola-boat.

cheliped (kë'li-ped), n. [< NL. chela<sup>1</sup>, q. v., + L. pes (ped-) = E. foot.] One of the large specialized chelate limbs of a crustacean, as the great claw of a lobster, modified to form a prehensile rather than a natatorial ergan. See chela1.

chelis¹ (kĕ'lis), n. [NL., ⟨ Gr. χηλή, a claw: see cheloid².] Same as cheloid². chelis², n. An erroneous form of kelis. Chelodina (kel-ō-di'nä), n. [NL., ⟨ Gr. χέλνς, a tortoise, + δεινός, terrible, mighty, large.] A genus of turtles, related to Chelys, typical of the group Chelodines (which see). C. longicollis is ample.

chelodine (kel'ō-din), n. [< Chelodina.] A turtle or river-torioise of Australia, of the genus Chelodina. The long-necked chelodine, C. longicollis, has a long, flexible, non-retractile neck, and a flat, narrow, pointed head. It is an active species, traversing rapidly the rivers and pools in which it lives.

Chelodines (kel-ō-dī'nēz), n. pl. [NL., irreg. Chelodina. Cf. chelodinc.] In zoöl., a name given by Huxley to a subdivision of Emydea, in which the pelvis is fixed to the carapace and plastron, the neek bends sidewise, and the head plastron, the neek bends sidewise, and the head cannot be completely withdrawn beneath the carapace. Same as *Pleurodira*. **cheloid** (kel'oid), a. [< Gr. xêxv, a tortoise, + zido; form. But ef. chelydoid.] Same as chelydoid.

Also written keloid, for celoid, by confusion with kelis,  $\langle Gr. \kappa\eta\lambda\eta, a \text{ tumor}: \text{see } kelis$ .] A raised fibrous tumor (fibroma) of the skin, with spurred contours, apt to return in its site if cut ont, but not dangerous. Also called Aliberts cheloid, Aliberts cheloid, and formerly sometimes concroid. Additional chelis and formerly sometimes concroid. chelis, and formerly sometimes cancroid.—Addison's cheloid, a misnomer for Addison's kelis. See kelis. cheloma (kē-lō'mä), n.; pl. chelomata (-ma-tä). [NL., < Gr.  $\chi\eta\lambda\eta$ , a claw, + -oma. See cheloid².] Same as cheloid².

Chelone (ke-lō'nō), n. [NL., ζ Gr. χελώνη, a tortoise.] 1. A genus of turtles; the green turtles, such as Chelone midas, and the hawk'sbill or tortoise-shell turtle, Chelone imbricata. Also written Chelonia. See cut under Chelonia.de.—2. In bot., a small genus of serophulariaceous perennial plants, in which the corolla is inflated, arched, and nearly closed, so as to restablish the head of a tortice where the way. semble the head of a tortoise, whence the name: related to *Pentstemon*. The species are natives of the United States, and the most common one, *C. glabra*, is occasionally cultivated and popularly known as snakehead or turtle-head.

order of Rep-tilia, in which the body is inclosed in a shell eonsisting of a carapace and a plastron, from between which the head, tail, and four limbs

the head, tail, and four limbs protrude. These animals have the bones of the skull united to such a degree that the quadrates and pterygoids form part of the same mass as the rest; there are no teeth, the jaws being incased in horn and forning a beak; the eyes are provided with eyelids; and a sacrum is developed. In consequence of the formation of the shell, the cervical and caudal regions are the only movable parts of the spinal column; the dorsal vertebre are devoid of transverse processes; the ribs are not movable upon the vertebre; and the mion of the vertebre and ribs by means of superficial bony plates almost always forms the carapace or upper shell, the lower shell or plastron being composed of dermal bones, usually 9 in number, 1 median, and 4 lateral and paired. Tortoise-shell is the peculiar epidermal or exoskeletal integument of the bony case. The lungs extend into the abdominal eavity with the other or hyosternum; HPP, hypoplastron or hyposternum; HPP, hypoplastron

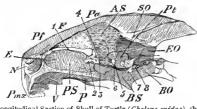

long periods without food. Some, however, are quite active. They are oviparous, most of the species are carnivorous and predatory, but the true land-torbises are mainly herbivorous. There are over 200 species, among them a few gigantic ones, as the tortoises of the Galapagos and Mascarene islands: one of the fossil species is said to have been about 20 feet long. The living genera are very numerons. The Chelonia are variously subdivided. They were formerly generally distributed among four families, the club-footed land-tortoises, the related fresh-water tortoises, the soft tortoises, and the sca-turtles. Huxley called these four groups Yestudinea, Emydea, Trionychoidea, and Ewereta. These groups have, however, been long discarded, and the species are now segregated among many families which have been variously combined. Most of the species of the southern hemisphere belong to a peculiar old-fashioned group, the pleurodirous, while those of the northern are cryptodirous. Also Chelonides, Chelonia.

2. [Used as a singular.] Same as Chelonia, 1. chelonian (ke-lō'ni-an), a. and n. [< Chelonia + -an.] I. a. Of, pertaining to, or having the characters of the Chelonia; testudinate.

hawk's-bill turtle (C. imbricata). Another leading form is the loggerhead, Caouana (or Thalassochelys) caretta. Formerly the Dermatochelys (or Sphargis) coriacea was referred by some to the family, but it has long been universally isolated as the representative of a very distinct family (Dermatochelyidae or Sphargididæ), and even suborder (Athecæ). The green turtle and the loggerhead are known to hybridize, the progeny being known to the fishermen as the bastard turtle, and having the scientific name of Colpochelys kempi. The group is the same as Euereta (which see). See turtle.

or some related genus; an alligator-tortoise.
Chelyetes (ke-li'e-tēz), n. [NL., < Gr. χέλνς, a
tortoise, + (†) ἔτης, a kinsman, neighbor.] The
typical genus of mites of the family Chelyetidæ.
Chelyetidæ (kel-i-et'i-dē), n. pl. [NL., < Chelyetes + -idæ.] A family of mites, with the
skeleton composed of sclerites embedded in a
soft skin, stigmata near the rostrum, and legs soft skin, stigmata near the rostrum, and legs of five joints, the first pair being tactile organs. They are remarkable for the enormously developed palpi and sharp rostrum, well suited for plunging into the body of their victims, upon whose juices they subsist. The family contains predatory species, such as Chelyetes parasitivorax, C. heteropalnus, etc., which it has been shown are strictly parasitic, although with a form of parasitism not contemptated in Van Beneden's classification, namely, a parasitism beneficial to the host, as the gnest lives upon other parasites which are injurious to the host. Chemical acetification. See acetification.—Chemical action. See action.—Chemical affinity, elective affinity, names formerly used for chemical force, and implying a property inherent in atoms of selecting other atoms with which to unite, or of preferring one combination to another.—Chemical analysis, the resolution of complex bodies into their elements. It is either qualitative or quantitative. Qualitative analysis consists in the determination of the component parts merely as respects their nature, and without regard to their relative proportions. Quantitative analysis consists in the determination of the relative proportions of the components.—Chemical black, bronze.—See black, bronze.—Chemical change, as distinguished from physical change, a change which destroys the identity of the substance affected. A physical change is distinguished from physical change, a change which destroys the identity of the substance affected. A physical change with electricity, without losing its identity as copper. But if copper is put into nitric acid, it dissolves and is converted into another substance, copper nitrate. The copper, in consequence, has lost its identity, and has undergone a chemical change.—Chemical combination, the intimate union by chemical force of two or more elements or compounds to form a new compound differing in properties from either of its constituent bodies. It differs from mechanical mixture in that each element of a chemical combination has a certain fixed and invariable combining proportion, whereas a mixture of substances can be made with varying amounts of its ingredients. In a mechanical mixture the particles of each of its ingredients can usually be identified and separated by mechanical means; in a chemical combination the constituents are so blended that

weights of the resultant calcium earbonate and sodium chlorid.—Chemicai equivalent, extinguisher, ferment, fire-engine, etc. See the nouns.—Chemical force, the force which binds together the atoms in a molecule, and causes chemical changes when dissimilar melecules are brought within the sphere of its action under proper conditions.—Chemical formula, a symbolic expression used to represent the composition of a substance. In the formulas now generally adopted by chemists each elementary substance is indicated by the first letter or letters of its name, called its chemical symbol; and to express the compounds of the elements, their symbols are arranged together, each denoting a single atom, and small numbers are written after a symbol and a little below (sometimes, and formerly slways, nove) the line, indicating how many atoms of the element exist in the compound. Thus, Il menus 1 atom of hydrogen; H2O means 2 atoms of hydrogen united with 1 of oxygen, forming the compound water; KHO menus 1 atom of potassium (kalium), 1 of hydrogen, and 1 of oxygen, forming the compound potassium hydrate; and so on. If a mumber is placed at the beginning of the fermula, it mutiplies the entire formula like an algebraic coefficient; thus, 2H2O means 2 parts or 2 melecules of water. So, too, a small number placed after a parenthesis multiplies the portion included; thus, Ca<sub>3</sub>(PO<sub>4</sub>)<sub>2</sub> denotes 3 atoms of calcium combined with 2 equivalents of the radical PO<sub>4</sub>, forming tricalcium phosphate or hene phosphate. Chemical fermula expresses simply the relative number of atoms of the elements present; a rational formula. An empirical formula expresses simply the relative number of atoms of the elements present; a rational formula expresses not only the relative number of atoms, but also seme conception of the mode of union of the atoms, the groups of radicals contained in the substance, the class to which it belongs, etc. Thus, the empirical formula os suggests to the chemist many of its properties and reactions. battlements, and affording means of communication between towers and bastions. In the cariler castles the system of defense adopted involved simost complete separation of each tower or post from the others, and the chemin-de-ronde was intercepted by each of these; this caused the loss of many fortresses, a sudden attack often shutting up the defenders in their isolated posts. The castles of the fourteenth century were free from this defect, the chemin-de-ronde becoming spacious and uninterrupted, so that the garrison could be massed readily at any point.

they undergo in consequence of changes in their ultimate composition. It regards all substances as made up of atoms (see atom) which are indivisible and have certain unchanging properties. An elementary substance consists of groups of chemically united atoms of the same kind; a compound substance, of groups of chemically united atoms of two or more different kinds. All compound substances, and most elementary ones, consist of definite groups of chemically united atoms which are called molecules. Each molecule has exactly the same chemical composition and properties as the whole mass of the substance, and is the smallest mass into which the substance can be divided without losing its identity. The laws, causes, and effects of changes in the kind, and the number and arrangement, of atoms within the molecule are the subject-matter of the science. See chemical.—Agricultural chemistry. Also called applied chemistry.—Theoretical chemistry, the study of the general laws governing chemical action, and of their bearing on the theories of matter.—Thermal chemistry, or thermo-chemistry, treats of the phenomena and alway of the development and disappearance of heat induced by chemical reactions.

Chemitype (kem'i-tip), n. [< chemi(cal) + type.]

A process for obtaining casts in relief from engravings. A polished zine plate is covered with an atching recover.

A process for obtaining casts in relief from engravings. A polished zine plate is covered with an etching-ground, on which the design is etched with a point and bitten in with dilute aqua fortis. The etching-ground is then removed, and every particle of the acid well cleaned off. The plate is covered with filings of a fusible metal, and heated until the metal has melted and filled the engraving. When cold it is scraped away to the level of the zine plate in such a manner that none of it remains except what has entered the engraved lines. The plate is next submitted to the action of a weak solution of muriatic acid; and, as the one of these metals is negative aid, so that the fusible metal which has entered the hollows of the engraving is left in relief, and may be printed from in a press. Chemitype is particularly adapted for the production of maps.

chemitypy (kem'i-ti-pi), n. Samo as chemitype, chemolysis (ke-mol'i-sis), n. [< ehem(ie) + Gr. \( \text{Note}, \) solution, < \( \text{Note}, \) solve.] The analysis or separation of a compound into its constituent parts by chemical means; chemical analysis.

The fruit of species of Cerasus (which is commonly regarded as a subgenus of Prunus), consisting of a globose pulpy drupe inclosing a one-seeded smooth stone; also, a tree producing this fruit. The cultivated varieties of the garden-cherry probably all belong to two species, Prunus Cerasus and P. avium, both doubtless natives of Europe. It is related by Pliny that this fruit or a cultivated variety of it was brought from Cerasus in Pontus to Italy after the defeat of Mithridates by Luculius, about 70 l. c. It was introduced into England by the Romans about 120 years afterward. There are many kinds, as the red. black, and white-hearts, the Mayduke, bigaroon, morelle, Kentish, etc. The wild or crab cherry, mazard or gean of Great Britain, is a wild atate of the Prunus avium, which is also found in various other parts of Europe. From the fruit of its different varieties several highly esteemed cordials are prepared, as the maraschino of Italy, the ratafia of France, the kirschwasser of Germany, etc. To this group of cherries, distinguished by laving their flowers and fruits in clusters, belong also the mahaleb cherry (P. Mahaleb) of Europe, with very iragrant flowers, and the ground-cherry (P. Chanacecrasus), as well as the wild red cherry (P. Pennsylvanica) and the dwarf cherry (P. Padus) of North America. A second section of the genus has the flowers in racemes, and the fruit smaller and less palatable. To this belong the bird-cherry (P. Padus) of Europe, and the wild black cherry, also called the rum- or cabinet-cherry (P. Serotina), and the choke-cherry (P. Virginiana) of America. One of an order of angels variously represented at different times, but generally as winged spirits with a human countenance (often simply as winged heads), and distinguished by their as winged heads), and distinguished by their knowledge from the seraphs, whose distinctive quality is love. In the celestial hierarchy cherubs are represented as next in order to serapha. The first mention of cherubs is in Gen. iii. 24, where their figure is not described, but their office was, with a flanning sword, to keep or guard the way of the tree of life. Figures of a pair of cherubs were placed on the mercy-aeat of the ark, and a pair of colosal size overshadowed it in Solomon's temple with the canopy of their contiguously extended wings. They are called "the cherubins of glory" (Heb. ix. 5), as on them the glory, when visible, rested. They were anointed with the holy oil, like the ark itself and the other sacred furniture. Their wings were stretched upward, and their faces turned "toward each other, and toward the mercy-scat." The cherubs seen in Ezeklel's vision had each four heads or faces, the hands of a man, and wings. The four faces were the face of a cherub, that of a man, that of a lion, and that of an eagle. They had the bodily form of a man. (Ezck. x.) The hieroglyphical and emblematical figures embroidered on the vells of the tabernacle were called "cherubins of cunning work" (Ex. xxvi. 1).

The squares are alternately light and dark, and in beginning a game the board must be so

Chess-board, with pieces in position

placed that the square at the right-hand corner is a light one. The vertical rows of aquares are called files, those which run from right to left, ranks or lines, and those (of the same color) which run obliquely, diagonals. Each party has sixteen pieces, differently colored to distinguish those of one side from those of the other, viz., a king, a queen, two bishops, two knights, and two rooks or castles, placed on the aquares of the end line of the board, and eight pawns placed on the next line in front. The king and queen are placed on the two middle squares, the queen on her nwn color (light or dark), and by the side

of each are placed a bishop, a knight, and a rook, in this order. The pieces move according to certain laws over unoccupied aquares, the knight alone being free from this latter restriction (see below). The king moves one aquare in any direction (except into check); the queen in any direction and to any distance along the rows of aquares, and also along the diagonals; the rooks or castles in any direction along the files or ranks of aquares; the bishops (of which there is one on each color) in any direction along the diagonals of the color on which they are originally placed; the knights one square on one row and then two squares and then one) in any direction, without reference to interposing pieces; and the pawns one square ahead on the files. A piece is taken by removing it from the board and placing the capturing piece in its place. In taking, each piece makes some one of its ordinary moves, except the pawn, which takes by moving one square forward on a diagonal; the knight alone can take by jumping over an intervening piece. The object of the game is to capture the king of the opposing party; and this is effected by an attack so planned that it is impossible, either hy moving the opposing king or by interposing another piece, to prevent him from being taken on the next move—that is, by placing the opposing king in a check from which he cannot escape. (See check1, checkmate, and statemate.) The squares of the board are commonly numbered along the files, forward from either party, from the principal pieces placed upon them at the beginning of a game: as, the queen's rook's square (abbreviated Q. R. sq.), queen's rook's accond square (Q. R. 2), etc.

The Young Tamlane (Child's Ballads, I. 117). Chess has been known to the Chinese for many centuries under a form not very unlike our own game. The board has 64 squarea, is played with 16 men on each side, the two at the corners having equal power, and the next two (called horses) having a move equivalent to that of our knight. The chief differences are that the Chinese adversaries are separated by a river, over which some pleces cannot pass, while the "King" is confined to a square of nine moves only; and that the pieces are placed upon the intersections of the lines forming the board, instead of on the squarea.
